ACKNOWLEDGEMENT

I express my sincere gratitude to RK NEXORA, RKNEXORA PRIVATE LIMITED, _____ (College Name), my faculty mentors and the internship supervisor, _____, for their guidance and support. The structured activities, learning resources and regular feedback helped me complete this internship in Digital Marketing successfully.

I am thankful to the Head of the Department and the college mentor for their encouragement and for guiding me in preparing this report. I am also grateful to the management of RKNEXORA PRIVATE LIMITED for providing a professional learning environment and the opportunity to learn and apply my knowledge in a practical setting. The concept sessions, hands-on tasks with sample websites and demo accounts, and the supervisor's patient and detailed feedback helped me understand how digital campaigns are planned and measured behind the scenes.

Finally, I thank my family and peers for their constant encouragement throughout the programme.

PREFACE

Internships are an important part of the undergraduate programme, as they allow students to see how classroom learning is applied in real organisations. The Four-Year Undergraduate Programme (FYUGP), introduced in line with the National Education Policy 2020, gives special importance to experiential learning, skill development and employability. This report has been prepared as part of the internship requirement of Magadh University and the Higher Education guidelines applicable in Bihar.

The report describes the internship undertaken in Digital Marketing at RKNEXORA PRIVATE LIMITED, the plan followed, the work carried out, and the learning gained. When a person wants to find a coaching class, a doctor, a shop or a service, the first thing most of them do is search on Google or check a social media page. Businesses of every size, from a small tuition centre in Gaya to a national brand, therefore need to be found online, to give useful information, to answer enquiries and to turn visitors into customers. Digital marketing is the set of methods that make this possible: search engine optimisation, content, email, paid search advertising, social media, landing pages and analytics. This internship offered a first-hand introduction to how these methods work together.

The report has been arranged in the order suggested by the University, beginning with the cover page and acknowledgement and ending with the conclusion and attendance sheet. It is hoped that the report gives a clear and honest account of the internship experience. All examples in it use dummy data and fictitious brands; no real customer information was handled and no real money was spent on advertising.

EXECUTIVE SUMMARY

This report documents the internship completed in Digital Marketing at RKNEXORA PRIVATE LIMITED (RK NEXORA - 'Campus to Career'). The programme required a minimum of 120 hours, completed over about four to five weeks (28 working days) with daily sessions of four to five hours, and was supported by an attendance log, supervisor guidance and review.

Background. Digital marketing means promoting products, services and ideas through digital channels such as search engines, websites, email, social media and online advertising. Its great strength is that results can be measured: how many people saw an ad, visited a page, filled a form or bought a product. A good digital marketer therefore combines creativity with data. The work covers understanding the customer, being found in search (SEO), creating helpful content, building an email relationship, running paid ads, connecting social media with the website, designing pages that convert visitors, tracking behaviour with analytics and reporting results honestly. For a student from any discipline, the internship shows how communication, psychology, writing, technology and analysis come together in a real marketing job.

Objectives. The internship aimed to (i) build a structured understanding of digital marketing fundamentals, channels and the marketing funnel, (ii) learn SEO basics and keyword research, (iii) learn content marketing and email marketing, (iv) learn Google Ads basics, social media integration and landing page optimisation, (v) learn web analytics with Google Analytics and campaign reporting, and (vi) develop communication, documentation and professional discipline.

Work carried out. The student first studied digital marketing fundamentals, then worked through SEO basics, keyword research, content marketing, email marketing, Google Ads basics, social media integration, landing page optimisation, web analytics and campaign reporting. Each topic had a concept session followed by a hands-on task using free tools, sample websites and dummy data. The later part of the programme was devoted to a case study, a mock practical exercise, supervisor review and preparation of this report.

Project. The work was tied together in a project titled *Digital Marketing Campaign & SEO Project*, in which keyword research, SEO and campaign set-up were performed and a performance report was prepared.

Method. A blended method was followed - learn, practise, document and review - supported by a daily attendance log with day-wise remarks and regular feedback from the supervisor.

Learning gained. The student gained a clear understanding of how digital campaigns are planned, run and measured, practical familiarity with keyword research, on-page SEO, content planning, email metrics, Google Ads budgeting, UTM tagging, landing page testing, Google Analytics reports and campaign reports in MS Excel, awareness of consent, advertising and data protection rules, and improved communication, analytical thinking and professional discipline.

Key observations. Marketing works best when it starts from what the customer is searching for; visitors convert only when the landing page matches the promise of the ad; every channel must be tracked with its own tags; and reports should lead to decisions and not merely list numbers.

Conclusion. The internship met its objectives and contributed to the student's academic understanding, employability and confidence. The report follows the University's suggestive format: cover page, acknowledgement, certificate, contents, preface, executive summary, about the agency, plan and execution, learning outcome, conclusion and attendance sheet.

ABOUT THE AGENCY

RK NEXORA, a unit of RKNEXORA PRIVATE LIMITED, provides structured internship and skill-development programmes under the theme 'Campus to Career'. The organization focuses on academic-industry alignment, practical exposure, assessment, documentation and employability-oriented learning.

Particulars	Details
Name of Agency	RKNEXORA PRIVATE LIMITED
Programme / Unit	RK NEXORA - Campus to Career
Registered Office	C/O Mukesh Kumar, Khiri, PS Atri, Jethiyan, Atri, Gaya - 805236, Bihar, India
CIN	U85499BR2026PTC086757
Email	rknexorapvtltd@gmail.com
Website	www.rknexora.org
Internship Topic	Digital Marketing

1. Vision

To support students in developing practical, professional and industry-relevant capabilities.

2. Mission

To deliver structured learning experiences that connect academic knowledge with workplace expectations.

3. Activities of the Agency

1. Structured internship programmes aligned with university and higher-education requirements.
2. Skill-development learning modules, practical activities and assignments.
3. Attendance tracking, supervision, assessment and documentation.
4. Employability-oriented guidance connecting campus learning to career readiness.

4. Programme Structure

The internship programme is organised around a fixed number of learning hours, completed over a defined period. Each intern is registered on the internship portal with a unique registration number, is assigned a supervisor, follows a day-wise plan and maintains an attendance log. Learning is organised into three phases: **Orientation** (Days 1-2), **Learning and Practice** (Days 3-22, ten sub-topics of two days each: one concept day and one hands-on day) and **Project and Review** (Days 23-28), followed by a concluding review.

5. Role of the Supervisor

The internship supervisor assigned by the agency guided the student through the programme, explained concepts, assigned practice tasks, reviewed the daily log and gave feedback. The supervisor also verified attendance and reviewed the student's work at the end of the programme.

PLAN AND EXECUTION

1. Objectives

The internship was planned around the following objectives, each linked to a part of the programme:

1. Understand Digital Marketing - meaning, channels, the marketing funnel and online strategy (Week 1).
2. Learn SEO basics - on-page SEO, titles, meta tags and search ranking factors (Week 1).
3. Learn keyword research and content marketing - finding keywords, search volume and competition; blogs, articles, videos and content planning (Week 2).
4. Learn email marketing - email lists, newsletters, subject lines and campaign metrics (Week 2).
5. Learn Google Ads basics, social media integration and landing page optimisation - search ads, bidding, ad copy and budget; linking social media with the website; page layout, call to action and conversion tips (Week 3).
6. Learn web analytics and campaign reporting - Google Analytics traffic, sources, behaviour and conversions; compiling results, KPIs and recommendations (Week 4).
7. Develop professional discipline - communication, honesty, documentation and report writing (throughout).

2. Methodology

The programme followed a blended method made up of four connected steps, repeated for each topic:

Learn. Each topic began with a concept session in which the supervisor explained the purpose of the channel or tool, its main terms and how it connects with the other parts of a digital campaign. Notes were prepared in the student's own words.

Practise. The concepts were then applied in guided hands-on tasks - reviewing the pages of a sample website for SEO, researching keywords in free tools, planning a content calendar and writing a blog outline, designing an email in a free email tool, drafting a Google Ads plan and ad copy without spending real money, creating UTM-tagged links, wire-framing and testing a landing page, exploring a Google Analytics demo account and compiling a campaign report in MS Excel. Only fictitious brands, sample websites, demo accounts and dummy data were used, so that no real customer information was handled.

Document. Every day's work was recorded in the internship attendance log with a short remark, and sheets, drafts and reports were saved so that the work could be reviewed.

Review. The supervisor reviewed the work, pointed out errors and suggested improvements. Review days, a case study and a mock practical exercise helped to consolidate the learning.

3. Understanding Digital Marketing - Concepts Studied

3.1 Digital marketing fundamentals

Digital marketing is the promotion of a brand, product or service through electronic and online channels. The main channels are search engine optimisation (SEO), search engine marketing (paid ads on search), content marketing, email marketing, social media marketing, display and video advertising, affiliate and influencer marketing, and mobile and messaging marketing such as SMS and WhatsApp. These can be grouped as *owned media* (channels the brand controls, such as the website, blog, email list and social pages), *paid media* (advertising that the brand pays for, such as search and social ads) and *earned media* (attention gained without payment, such as reviews, shares and press mentions). A good strategy uses all three in balance.

The marketing funnel describes the stages through which a customer moves: awareness (the person learns that the brand exists), consideration (the person compares options), conversion (the person buys, enrols or enquires) and retention and advocacy (the person comes back and recommends the brand). Different channels and

content work best at different stages: SEO and social posts for awareness, blogs, videos and email for consideration, search ads and landing pages for conversion, and email and community for retention. The customer journey is rarely a straight line, because people may see a social post, search later on Google, read a blog, join an email list and finally enquire after a retargeting ad.

Online strategy follows a sequence of steps. First, the business sets clear goals, such as a number of enquiries or sales. Second, it understands the audience through personas and the questions they ask. Third, it decides its positioning and message. Fourth, it chooses the channels and the budget. Fifth, it plans content and campaigns. Sixth, it measures results and improves. A useful planning frame is RACE: Reach (get noticed), Act (get people to interact), Convert (get them to buy) and Engage (build a lasting relationship). For a local business the website should be mobile-friendly, fast and secure (HTTPS), and the Google Business Profile should be completed with the business name, address, phone number, timings, photographs and reviews so that the business appears on Google Search and Maps. India's large mobile-first audience, low-cost data, UPI payments and growing use of Hindi and local languages online make digital marketing a powerful tool for businesses in small towns, as long as it is done honestly and with respect for the customer.

3.2 SEO basics

Search engine optimisation is the practice of improving a website so that it appears higher in unpaid search results and attracts the right visitors. A search engine works in three steps: it *crawls* the web by following links to find pages, it *indexes* the pages by storing and understanding their content, and it *ranks* them when someone searches, showing the pages that are most relevant and helpful. Tools such as Google Search Console show how Google sees a site, which pages are indexed and which search queries bring visitors, and a sitemap and robots file help search engines to find the right pages.

Ranking depends on many factors. The most important are the relevance and quality of the content to the search; the experience, expertise, authoritativeness and trustworthiness of the page and site (often called E-E-A-T); links from other trusted websites (backlinks); a mobile-friendly, secure and fast page, measured partly by the Core Web Vitals for loading, interactivity and visual stability; and a good user experience. SEO has three parts. **On-page SEO** covers what is on the page: a unique title tag (commonly kept to about 50 to 60 characters so that it is shown in full), a meta description (about 150 to 160 characters, written to persuade people to click), a single clear H1 heading and logical sub-headings, a short readable URL, natural use of the keyword and related words in the text, helpful and original content, descriptive image file names and alt text, and internal links to related pages. **Off-page SEO** covers signals from outside the site, such as quality backlinks, brand mentions and, for local businesses, consistent name, address and phone details in online directories and reviews. **Technical SEO** covers crawlability, site speed, mobile design, secure connection, duplicate content, structured data and error-free pages.

SEO has to be done in a white-hat way, which means following the search engine's guidelines. Practices such as stuffing pages with keywords, buying links, copying content, hiding text or cloaking can lead to penalties and drops in ranking. SEO is a long-term effort: results usually take weeks or months, and search engines also change their features, including the use of artificial intelligence in results, so the best protection is to create genuinely helpful content for people.

3.3 Keyword research

Keywords are the words and phrases that people type or speak into search engines. Keyword research finds out what the target audience is searching for, how often, and how hard it will be to rank or to advertise for it. Keywords are described by length, as short-tail (one or two words, such as 'coaching') and long-tail (three or more words, such as 'class 10 maths coaching in Gaya'), and by *search intent*, which is the purpose behind the search. Informational intent means the person wants to learn something ('how to prepare for board exams'), navigational intent means the person wants a particular site, commercial intent means the person is comparing options ('best coaching in Gaya') and transactional intent means the person is ready to act ('class 10 coaching fees Gaya'). Matching the page to the intent is as important as including the keyword.

The research process is as follows. Start with seed keywords from the business, the products and customer questions. Expand them using Google's autosuggest, 'People also ask' and related searches, Google Trends for seasonal interest, the queries shown in Search Console and the free features of tools such as Google Keyword Planner. Record the average monthly search volume, the level of competition or difficulty, and, for advertising, the typical cost per click. Group related keywords into clusters, map each cluster to a page, and prioritise those with good relevance, reasonable volume, manageable competition and business value. For audiences in Bihar, keywords may be in Hindi, in Hinglish (Hindi written in Roman letters) and with local place names, and voice search produces longer, more conversational queries, so these variants should be researched too.

3.4 Content marketing

Content marketing is the creation and sharing of valuable, relevant material, such as blogs and articles, videos, infographics, e-books, case studies, podcasts and newsletters, to attract and retain a clearly defined audience and eventually lead to a business action. Instead of interrupting people with advertisements, it helps them with information and earns their trust. A content strategy begins with the audience persona and the questions the audience asks at each stage of the funnel, selects content pillars or topic clusters around the main themes and keywords, chooses suitable formats, and prepares an editorial calendar with topics, owners, dates and the channels where each piece will be shared.

Good content has a clear headline, an interesting beginning, a logical structure with headings and short paragraphs, accurate information, examples, relevant images or videos and a call to action. It should be original and never copied, should be checked for facts and should show real experience and expertise. Content is then distributed through the website and SEO, social media, email and partnerships, and one piece can be repurposed, for example a blog turned into a short video and an infographic. Success is measured by traffic, time spent on the page, shares, sign-ups, enquiries and conversions. Content made with the help of artificial intelligence tools must be checked for accuracy and originality and must still be helpful to the reader.

3.5 Email marketing

Email is one of the most direct and cost-effective digital channels, because the brand owns the list and talks to people who have agreed to hear from it. A list is built through sign-up forms on the website, lead magnets such as a free guide or a demo class, and at events, always with the person's clear consent. Under India's Digital Personal Data Protection Act, 2023 and good marketing practice, an organisation should collect only the data it needs, state the purpose, honour requests to stop and never use purchased lists. Every marketing email should have the sender's identity, a clear unsubscribe link and a postal address, and customers who live in other countries may be covered by their own laws, such as GDPR in Europe or CAN-SPAM in the United States.

Kinds of emails include welcome emails, newsletters, promotional offers, transactional emails (receipts and confirmations), abandoned-cart reminders and re-engagement emails. The list is divided into segments, such as new subscribers, students of a particular class or past customers, so that each group gets relevant messages. A good email has a recognisable sender name, a short and clear subject line (often under about 50 characters, with curiosity or a benefit and no misleading claims), a preview text, one main goal with one clear call-to-action button, a mobile-friendly design and a suitable sending time. A/B testing compares two subject lines or buttons on small parts of the list. Sender authentication (SPF, DKIM and DMARC) and a clean list protect the sender's reputation and keep messages out of spam folders.

The main email metrics are: **delivery rate** (delivered emails divided by sent emails); **open rate** (opens divided by delivered, which can be inflated by privacy features of some email apps and should be read with care); **click-through rate** (clicks divided by delivered, multiplied by 100); **click-to-open rate** (clicks divided by opens); **conversion rate** (people who completed the goal divided by people who clicked); **bounce rate** (undelivered emails, hard bounces being permanent and soft bounces temporary); and **unsubscribe rate**. Tools used for sending include Mailchimp, Brevo and Zoho Campaigns, all of which have free or low-cost plans.

3.6 Google Ads basics

Google Ads is the advertising platform of Google, where advertisers pay mainly when someone clicks on an ad (pay-per-click, PPC). The main campaign types are Search (text ads on search result pages), Display (banners on websites and apps), Video (YouTube), Shopping (product listings), App and Performance Max, which runs across channels. Search ads suit businesses that want to reach people who are actively looking for a product or service. An account has a structure: the account contains campaigns (with budget, location and language settings); each campaign contains ad groups, which are tightly themed sets of keywords; and each ad group contains ads written for those keywords.

When someone searches, Google runs an auction among eligible ads. The position of an ad depends on its Ad Rank, which combines the bid, the quality of the ad and landing page (expected click-through rate, ad relevance and landing page experience, summarised as Quality Score from 1 to 10) and the expected effect of assets such as sitelinks. A high-quality ad can win a better position at a lower cost than a poor ad with a higher bid. Keywords are set with *match types*: broad match (wide variations), phrase match (searches that include the meaning of the phrase) and exact match (close variants of the exact meaning). *Negative keywords* stop ads from showing for unrelated searches, such as 'free' or 'jobs', which saves money. A responsive search ad takes up to fifteen headlines and four descriptions, within character limits of 30 and 90 characters, and Google tests combinations; extra assets such as sitelinks, call and location details make the ad larger and more useful. Targeting by location (for example Gaya and nearby towns), language (Hindi and English), device and time of day improves relevance.

Bidding strategies range from manual cost-per-click bidding to automated strategies such as maximise clicks, maximise conversions, target cost per acquisition and target return on ad spend, which need conversion tracking to work. The main metrics are impressions, clicks, CTR, average CPC, conversions, conversion rate, cost per conversion (CPA), conversion value, ROAS and impression share. A new advertiser should start with a small daily budget, a tightly focused set of keywords, clear ad copy, conversion tracking, and then review the search terms report every few days to add negative keywords and improve ads. Ads must follow Google's advertising policies and the law, avoid misleading claims and must not use another party's trademark in a prohibited way.

3.7 Social media integration

Social media integration means connecting social platforms with the website and with other channels so that they support each other. Website pages carry social sharing buttons, links to the social profiles and, where useful, embedded posts, reviews and testimonials as social proof. Social posts carry links to relevant landing pages, and a 'link in bio' page or a WhatsApp click-to-chat link makes action easy for mobile users. Open Graph tags ensure that when a page is shared it shows a correct title and image. Content is planned so that a blog, a video and a social post support the same campaign message, and the same brand name, colours and voice appear everywhere.

Tracking is what makes integration useful. UTM parameters are small tags added to a web link so that analytics can show where a visit came from: utm_source (for example instagram), utm_medium (for example social), utm_campaign (the campaign name) and optionally utm_content and utm_term. A tagged link looks like https://example.com/offer?utm_source=instagram&utm_medium=social&utm_campaign=festival_offer. A tracking pixel or tag from the social platform allows visitors to the website to be shown ads later (retargeting) and conversions to be measured, subject to the user's consent and the platform's rules. Consistent naming of campaigns, in lower case without spaces, avoids confusion in reports.

3.8 Landing page optimisation

A landing page is a page designed for one purpose, such as getting a visitor to book a demo class, download a guide or buy a product. It is usually the page where an ad or email link leads. The page should match the promise of the ad (message match), so that a person who clicked on 'free demo class' sees 'free demo class' in the headline and not a general home page. Main elements are a clear headline and sub-headline that state the

benefit, a relevant hero image or short video, a few short benefit points, social proof such as testimonials, ratings and photographs, a short form that asks only for the information that is really needed, a single prominent call-to-action button with action-oriented text, trust signals such as contact details, a privacy policy link and secure connection, and a short FAQ that answers common doubts. Extra navigation menus that distract from the single action are usually removed.

Optimisation means improving the **conversion rate**, which is conversions divided by visitors, multiplied by 100. Points to check are speed (compressed images and light design so that the page loads quickly on mobile data), a layout that works well on small screens, buttons that are large and clear, readable text with good contrast, a short and simple form, a headline that speaks to the visitor's need, honest urgency (such as a real last date) and no misleading claims. Changes should be tested through A/B testing, in which half of the visitors see version A and half see version B, and the winner is chosen only after enough visitors have taken part. Free tools such as heatmap and session recording tools show where visitors click and where they leave. Privacy rules require a clear consent line next to forms and a cookie notice where cookies are used.

3.9 Web analytics with Google Analytics

Web analytics is the collection and study of data about how visitors find and use a website. Google Analytics 4 (GA4) is the current version of Google's free tool and is based on *events*: every action, such as a page view, a scroll, a click, a form submission or a purchase, is recorded as an event. To set it up, a property and a data stream are created for the website, and a tracking tag is installed on the pages, either directly or through Google Tag Manager; the set-up is checked in the real-time report. Events that matter to the business, such as a form submission or a call click, are marked as *key events* (earlier called conversions).

The main reports show: **Acquisition**, which channels bring visitors (Organic Search, Paid Search, Social, Email, Referral and Direct); **Engagement**, which pages and events are used and for how long; **Monetisation** for sales; **Retention** for returning visitors; and **demographics and technology** of users. Common measures are users, new users, sessions, engaged sessions (sessions that lasted at least ten seconds, had a key event or had at least two page views), engagement rate (engaged sessions divided by sessions), average engagement time, key events and conversion rate. Attribution models decide which channel gets credit for a conversion when a customer used several. Connecting Google Analytics with Search Console and Google Ads shows the full path from the search query or ad to the conversion. Analytics data is personal data in many cases, so the site should have a clear privacy policy and cookie consent, and data should be used only for improvement of the service.

3.10 Campaign reporting

A campaign report tells the owner or client what was done, what it cost, what it achieved and what should happen next. A good report has an executive summary with the most important results in a few lines, the objectives and the time period, the channels used and the spend, the key results compared with the targets, charts and tables, the top and the weakest performers with reasons, the problems met, and clear recommendations for the next period. The metrics should follow the funnel: for awareness, impressions, reach and traffic; for consideration, click-through rate, engaged sessions, email opens and clicks; for conversion, leads, sales, conversion rate, cost per acquisition and return on ad spend; and for retention, repeat visits or purchases.

Some useful summary measures are **ROI**, calculated as (revenue minus cost) divided by cost, multiplied by 100; **ROAS**, which is revenue divided by ad spend; **CAC** (customer acquisition cost), which is total marketing cost divided by the number of new customers; and, in a simple form, the customer lifetime value that a customer brings. Reports are prepared weekly or monthly with the same method each time, in MS Excel, Google Sheets or a dashboard tool such as Looker Studio. Honesty is essential: results must not be inflated, problems must be shown, and the limits of the data must be explained, for example that a sample is small or that tracking started late.

3.11 Rules, ethics and limitations

Digital marketers must follow several laws and codes. The **Information Technology Act, 2000** governs online conduct and electronic records. The **Digital Personal Data Protection Act, 2023** requires lawful and consent-based use of personal data, such as email addresses and form entries. The **Consumer Protection Act, 2019** and the guidelines on misleading advertisements and endorsements, together with the **ASCI Code**, require truthful claims and the disclosure of paid endorsements. The **Copyright Act, 1957** and the **Trade Marks Act, 1999** protect content and brands. Rules of the telecom regulator on commercial messages and the Do Not Disturb registry apply to SMS and calls. Platform policies of Google, Meta and email providers must also be followed. Good practice includes honest claims, permission-based marketing, clear unsubscribe options, respect for privacy, avoiding fake reviews and misleading headlines, giving credit for borrowed content and checking facts. The tools, features, character limits and policies mentioned in this report change often, so they must be verified against official help pages, and the figures in the examples are dummy values for learning only.

4. Week-wise Plan and Execution

Week	Days	Activities
Week 1	Days 1-6	Orientation and foundations: company induction, introduction to digital marketing, digital marketing fundamentals, and SEO basics.
Week 2	Days 7-12	Find, create and communicate: keyword research, content marketing and email marketing, each with a concept session and a hands-on task.
Week 3	Days 13-18	Paid and conversion: Google Ads basics, social media integration, and landing page optimisation.
Week 4	Days 19-24	Measure and learn: web analytics (Google Analytics), campaign reporting, a case study exercise and a mock practical exercise.
Week 5	Days 25-28	Project closure: supervisor review and feedback, internship report drafting, presentation preparation and final review.

5. Week-wise Narrative

Week 1: The first week was devoted to orientation and foundations. After company induction, the student was introduced to digital marketing and studied digital channels, the marketing funnel and online strategy. The week ended with a study of SEO basics - on-page SEO, titles, meta tags and search ranking factors - supported by a simple SEO review of a sample website.

Week 2: In the second week the study moved to keyword research - finding keywords, search volume and competition - followed by content marketing, covering blogs, articles, videos and content planning for audiences, and email marketing, covering email lists, newsletters, subject lines and campaign metrics.

Week 3: The third week focused on Google Ads basics, including search ads, bidding, ad copy and budget; social media integration, including linking social media with the website and campaigns; and landing page optimisation, including layout, call-to-action and conversion tips.

Week 4: In the fourth week the student studied web analytics with Google Analytics - traffic, sources, behaviour and conversions - and campaign reporting - compiling results, KPIs and recommendations. A case study exercise and a mock practical exercise were completed in this week.

Week 5: The last week was devoted to project closure: supervisor review and feedback, drafting of the internship report, preparation of a presentation and final review before submission.

6. Topic-wise Learning in Detail

6.1 Digital Marketing Fundamentals

Concept: Digital channels, the marketing funnel and online strategy. *Practice carried out:* Mapping the channels to funnel stages for a sample business, writing a one-page online strategy with goals, audience, channels and metrics, and checking a sample Google Business Profile.

6.2 SEO Basics

Concept: On-page SEO, titles, meta tags and search ranking factors. *Practice carried out:* Auditing a sample page for title, description, headings, URL, image alt text and internal links, and rewriting them for a target keyword.

6.3 Keyword Research

Concept: Finding keywords, search volume and competition, and understanding search intent. *Practice carried out:* Building a keyword list of fifty terms for a sample business, adding intent, volume and competition, grouping them into clusters and mapping them to pages.

6.4 Content Marketing

Concept: Blogs, articles, videos and content planning for audiences. *Practice carried out:* Preparing a three-month content calendar with topics from the keyword clusters and writing the outline and first draft of one blog post with headings, call to action and sources.

6.5 Email Marketing

Concept: Email lists, newsletters, subject lines and campaign metrics. *Practice carried out:* Designing a welcome email and a newsletter in a free email tool, writing five subject lines for an A/B test, and calculating the metrics of a sample campaign.

6.6 Google Ads Basics

Concept: Search ads, bidding, ad copy and budget. *Practice carried out:* Drafting a search campaign plan with ad groups, keywords, match types, negative keywords, a responsive search ad with headlines and descriptions, and a budget forecast, without any real spending.

6.7 Social Media Integration

Concept: Linking social media with the website and campaigns. *Practice carried out:* Creating UTM-tagged links for each channel, a naming sheet for campaigns and a plan of share buttons, link in bio and retargeting audiences.

6.8 Landing Page Optimization

Concept: Landing page layout, call-to-action and conversion tips. *Practice carried out:* Drawing a wireframe of a landing page, writing its headline, benefits and call to action, and planning an A/B test.

6.9 Web Analytics (GA) and Campaign Reporting

Concept: Google Analytics traffic, sources, behaviour and conversions; compiling campaign results, KPIs and recommendations. *Practice carried out:* Exploring the Google Analytics demo account, noting acquisition, engagement and key event data, and preparing a campaign report in MS Excel with charts and recommendations.

7. Rules, Ethics and Good Practice - Points Studied

Digital marketing operates within a legal and ethical framework. Personal data, such as an email address or phone number, may be collected and used only with the person's consent and for a stated purpose under the **Digital Personal Data Protection Act, 2023**. Advertising claims must be true, and endorsements must be disclosed under the **Consumer Protection Act, 2019** and the **ASCI Code**. Content, images and music must

respect the **Copyright Act, 1957**, and brands must respect the **Trade Marks Act, 1999**. The **Information Technology Act, 2000** governs online conduct, and the **telecom regulator's rules** on commercial communication apply to SMS and calls. Google, Meta and email service providers have their own policies on ads, spam and data that must be followed.

Good practice includes using clear, honest headlines and offers, honouring unsubscribe requests immediately, never buying email lists, keeping customer data safe, using two-step verification for ad and analytics accounts, giving access to team members only as needed, avoiding black-hat SEO tricks, being open about sponsored content, and recording the approvals and changes made in each campaign.

8. Process Flows Studied

Process mapping was used to understand how a digital campaign moves from idea to report and who is responsible at each step. The main flows studied were:

- **Digital campaign:** Goal and audience > Strategy and channels > Keyword and content plan > Asset creation > Tracking set-up > Launch > Monitoring > Report and optimisation.
- **SEO workflow:** Keyword research > Page mapping > On-page optimisation > Technical check > Content publishing > Link and local citations > Search Console monitoring > Update.
- **Content process:** Topic from keyword cluster > Brief and outline > Draft > Edit and fact-check > Design and publish > Promote on social and email > Measure and refresh.
- **Email campaign:** Segment list > Write subject and body > Test > Send at planned time > Track opens, clicks and conversions > Clean list.
- **Google Ads:** Campaign goal > Keywords and match types > Ad groups and ads > Budget, bids and targeting > Launch > Search terms review > Optimise.
- **Analytics and reporting:** Install tag > Verify data > Define key events > Collect data > Analyse by channel and page > Report > Decide next actions.

9. Worked Examples with Sample (Dummy) Data

The examples below use a fictitious local business, *Gyan Jyoti Classes*, a coaching centre for Class 9 and 10 in a town in Bihar. All names, numbers and results are dummy figures for learning.

Example A: Goal, audience and funnel

The sample goal for one month was to get 100 enquiries (calls, WhatsApp messages and form fills) and 20 admissions for the new Class 9 and 10 batches, with a total marketing spend of about Rs. 20,000. The main audience was parents of children in Class 8 to 10 living in the town, who search on Google and use WhatsApp and Facebook, and students aged 13 to 16 who watch videos on YouTube and Instagram. The funnel was planned as follows. *Awareness:* local SEO, a Google Business Profile and short videos. *Consideration:* blog posts such as 'How to prepare for Class 10 board exams', an email series with study tips and testimonials. *Conversion:* Google search ads and a landing page for a free demo class. *Retention:* a monthly newsletter to parents and a referral offer.

Example B: Keyword research table

A short extract of the keyword list is shown below, with intent, dummy monthly search volume, competition and the page where the keyword will be used.

Keyword	Intent	Searches / month (dummy)	Competition	Page
class 10 coaching in Gaya	Transactional	720	Medium	Home / Class 10 page
best coaching in Gaya	Commercial	1,300	High	Home page

Keyword	Intent	Searches / month (dummy)	Competition	Page
class 10 maths tuition near me	Transactional	390	Low	Class 10 Maths page
how to prepare for board exams	Informational	2,900	High	Blog post
class 9 science notes	Informational	1,100	Medium	Blog / resources
free demo class Gaya	Transactional	210	Low	Landing page

The student selected 'class 10 maths tuition near me' and 'free demo class Gaya' as quick wins, because the competition is low and the intent is strong, planned the blog keyword 'how to prepare for board exams' as a long-term traffic builder, and noted that the high-competition keyword 'best coaching in Gaya' would need reviews, backlinks and time.

Example C: On-page SEO for the Class 10 page

The title tag was written as 'Class 9-10 Coaching in Gaya | Gyan Jyoti Classes' (about 48 characters, with the main keyword at the beginning). The meta description was written as 'Join Gyan Jyoti Classes in Gaya for Class 9 and 10 coaching with small batches, weekly tests and doubt classes. Book a free demo class today.' (about 141 characters, with a benefit and a call to action). The H1 heading was 'Class 9 and 10 Coaching in Gaya with Small Batches', followed by H2 headings such as 'Subjects and Teachers', 'Weekly Tests and Doubt Classes', 'Fees and Batches' and 'Frequently Asked Questions'. The URL was kept short as /class-10-coaching-gaya, every image received a descriptive alt text such as 'Class 10 students in a maths doubt class', and internal links connected the page to the demo class page and the blog.

Example D: Google Ads plan and weekly metrics

A sample search campaign was planned with a daily budget of Rs. 300, targeted at Gaya and nearby towns in Hindi and English, with phrase and exact match keywords and negative keywords such as 'free notes', 'jobs' and 'online course'. Expected figures for one week: spend = 300 x 7 = Rs. 2,100. At an average CPC of Rs. 12, clicks = 2,100 / 12 = 175. At a CTR of 4%, impressions = 175 / 0.04 = 4,375. At a landing page conversion rate of 8%, enquiries = 175 x 8% = 14, so the cost per enquiry (CPA) = 2,100 / 14 = Rs. 150. If 4 of the 14 enquiries join at a fee of Rs. 6,000, the revenue is Rs. 24,000, the cost per admission = 2,100 / 4 = Rs. 525 and ROAS = 24,000 / 2,100 = about 11.4. The revenue figure is simplified; real profitability also depends on the cost of teaching. After a week, the search terms report showed that 'tuition fees' brought many clicks but no enquiries, so it was added as a negative keyword.

Example E: Email campaign metrics

A welcome and offer email was sent to a list of 2,000 subscribers. 40 emails bounced, so delivered = 1,960 and the delivery rate = 1,960 / 2,000 = 98%. Opens were 588, so open rate = 588 / 1,960 = 30%. Clicks were 98, so click-through rate = 98 / 1,960 = 5.0% and click-to-open rate = 98 / 588 = about 16.7%. 6 people unsubscribed, an unsubscribe rate of 6 / 1,960 = about 0.31%. 12 clickers booked a demo class, so the conversion rate = 12 / 98 = about 12.2%. In the A/B test of subject lines, 'Free demo class for Class 9-10 - seats limited' had an open rate of 33% against 27% for 'Welcome to Gyan Jyoti Classes', so the first style was used in the next email.

Example F: UTM links

For the same offer, separate tagged links were created for each channel so that results could be compared: https://example.com/demo?utm_source=google&utm_medium=cpc&utm_campaign=class10_demo for the search ad, https://example.com/demo?utm_source=instagram&utm_medium=social&utm_campaign=class10_demo for the social post, and https://example.com/demo?utm_source=newsletter&utm_medium=email&utm_campaign=class10_demo for

the email. Lower case letters and a fixed naming pattern were used throughout, so that the three sources appeared separately in Google Analytics.

Example G: Landing page A/B test

Version A of the demo class landing page had a long form with seven fields and a generic headline. Version B had a three-field form (name, phone and class), a headline 'Book a Free Demo Class for Class 9 or 10', two parent testimonials and a prominent button. Each version received 1,000 visitors. Version A produced 40 form submissions, a conversion rate of 4.0%. Version B produced 62 submissions, a conversion rate of 6.2%. The uplift = (6.2 - 4.0) / 4.0 = 55%. Version B was adopted, and the next test compared two button texts. The student noted that a test should run long enough to give a reliable result and should change only one major element at a time where possible.

Example H: Google Analytics snapshot

In a sample month the website had 3,000 sessions. By channel: Organic Search 1,200 (40%), Paid Search 700 (23.3%), Social 500 (16.7%), Email 300 (10%), Direct 200 (6.7%) and Referral 100 (3.3%). Engaged sessions were 1,950, so the engagement rate = 1,950 / 3,000 = 65%. There were 90 key events (demo class bookings and call clicks), so the conversion rate = 90 / 3,000 = 3%. The report showed that organic search was the biggest source and email had the highest conversion rate, so the team decided to publish more blog posts and to grow the email list.

Example I: Monthly campaign report

For the month the total marketing cost was Rs. 20,000: Google Ads Rs. 8,400 (four weeks of Rs. 2,100), content and design Rs. 6,000, email tool and other costs Rs. 2,600 and tools and subscriptions Rs. 3,000. Total enquiries were 120 (56 from ads, 40 from organic search, 14 from email and 10 from social). Admissions were 22, so CAC = 20,000 / 22 = about Rs. 909. Revenue from the new admissions = 22 x 6,000 = Rs. 1,32,000, so ROI = (1,32,000 - 20,000) / 20,000 x 100 = 560%. The report was structured as an executive summary, goals and results against targets, channel-wise performance, best and weakest content, problems met (such as slow replies on weekends) and recommendations: increase the blog output, improve the landing page speed, add a referral email and reply to enquiries within one hour. The report noted that revenue was taken as the fee, for simplicity, and that actual profit would also depend on the cost of delivering the classes.

10. Project: Digital Marketing Campaign & SEO Project

Scope. The internship work was organised around a project in which keyword research, SEO and campaign set-up were performed and a performance report was prepared for a fictitious brand, using sample websites, demo accounts and dummy data.

Steps followed. (i) Studied the channels and set the goals, audience and funnel; (ii) researched keywords, grouped them into clusters and mapped them to pages; (iii) optimised the title, description, headings, URL and images of sample pages; (iv) planned a content calendar and wrote a blog outline; (v) designed a sample email, drafted a Google Ads campaign plan with ad copy, created UTM links and wire-framed a landing page; (vi) explored Google Analytics, compiled the campaign report in MS Excel and reviewed the work with the supervisor.

Skills and tools. SEO, Keyword Research, Google Ads, Email Marketing, Google Analytics and Content Marketing.

Outputs. Strategy note, keyword list and cluster map, SEO audit, content calendar and blog outline, email design and metrics sheet, Google Ads plan, UTM link sheet, landing page wireframe, campaign report, and this internship report.

11. Case Study Exercise: A Website with Visitors but No Enquiries

A case study exercise was completed on a typical digital marketing problem. The business and figures are illustrative and not taken from any real organisation.

Background. A small tuition and computer training centre (fictitious) had a website made by a friend two years ago. The owner started running Google ads for Rs. 400 a day and posting on social media, expecting many admissions.

Problem observed. In one month the ads brought about 900 clicks and Rs. 12,000 was spent, but only 6 enquiries came in. Almost all ad clicks landed on the home page, which was slow on mobile, had a long list of courses, no clear button and a contact form with ten compulsory fields. The site had no Analytics, so nobody knew which source or page worked. The ads used broad match keywords such as 'computer' and 'course', and many clicks came from unrelated searches. The page titles were all the same, and the Google Business Profile was incomplete. The owner felt that digital marketing does not work.

Analysis. The main problem was not traffic but conversion and targeting. Broad keywords and no negative keywords wasted money on irrelevant clicks. Sending all ads to the home page broke the message match between ad and page. The slow and confusing page, the long form and the missing call to action discouraged visitors from enquiring. With no tracking, the business could not learn or improve. The weak SEO and incomplete local profile meant that free local traffic was also lost.

Recommendations. (1) Install Google Analytics and conversion tracking for calls and form fills before any more spending. (2) Restructure the ads into small ad groups with phrase and exact match keywords, local targeting and a list of negative keywords, and review the search terms report every week. (3) Create separate landing pages for each main course, with a matching headline, benefits, testimonials, a three-field form and a click-to-call button. (4) Compress images and simplify the design so that pages load quickly on mobile. (5) Fix the page titles, descriptions and headings and complete the Google Business Profile with photographs, timings and reviews. (6) Start an email list for demo class sign-ups and send a short follow-up series. (7) Report weekly on spend, enquiries, cost per enquiry and admissions.

Expected result and lesson learned. With tracking, relevant keywords and focused landing pages, the same budget is expected to produce many more enquiries at a lower cost. The lesson is that digital marketing is a system: ads, pages, tracking and follow-up must work together, and numbers must be used to find and fix the weakest link.

12. Mock Practical Exercise: A Thirty-Day Mini Campaign

In the mock practical exercise the student planned and prepared a thirty-day digital campaign for a sample (dummy) local business, from the first goal to the final report, using the tools and methods practised earlier. The steps followed were:

1. **Strategy:** wrote the goal, audience, funnel and a simple budget.
2. **Keyword research:** built a keyword list, identified intent and mapped clusters to pages.
3. **SEO:** optimised the title, description, headings, URL and image text of the main pages and checked the Google Business Profile.
4. **Content and email:** planned a content calendar, wrote a blog outline and designed a welcome email with a subject line test.
5. **Google Ads:** drafted the campaign structure, keywords, negative keywords, ad copy and daily budget.
6. **Landing page and social integration:** wire-framed a landing page, created UTM links and planned the social posts and retargeting audience.
7. **Tracking:** listed the key events to track in Google Analytics and the checks needed before launch.

8. **Reporting:** used sample data to calculate CTR, CPC, CPA, conversion rate, ROAS and ROI and wrote a one-page report with lessons and next steps.

The exercise showed that every step depends on the one before it: wrong keywords lead to the wrong audience, a poor landing page wastes the ad budget, missing tracking makes learning impossible and an honest report is the base of the next campaign.

13. Sample Checklists Prepared

Checklists were prepared as part of the hands-on tasks. They reduce errors and make routine work easier to review.

Keyword Research and SEO Checklist

- Seed keywords and customer questions listed.
- Intent, volume and competition recorded for each keyword.
- Keywords grouped in clusters and mapped to one page each.
- Unique title tag and meta description written for every page.
- One H1 heading with logical sub-headings; short URL.
- Alt text added to images; internal links added.
- Site is mobile-friendly, secure (HTTPS) and loads fast; Google Business Profile complete.

Content Marketing Checklist

- Audience persona and funnel stage identified for each piece.
- Topic comes from a keyword cluster and a real customer question.
- Headline and introduction are clear and helpful.
- Facts checked, sources named and content is original.
- Headings, short paragraphs, images and a clear call to action included.
- Plan for distribution on social media and email made.
- Performance to be checked after thirty days and content updated if needed.

Email Campaign Checklist

- Subscribers have given consent; no purchased list is used.
- List segmented and the goal of the email fixed.
- Clear sender name, short subject line and preview text.
- One main call-to-action button and mobile-friendly design.
- Unsubscribe link and business address included.
- Test email sent and links checked.
- Metrics (delivery, open, click, conversion, unsubscribe) recorded after sending.

Google Ads Checklist

- Campaign goal and conversion tracking set up before launch.
- Location, language, daily budget and schedule decided.
- Ad groups are tightly themed with relevant keywords and match types.
- Negative keywords added from the start.
- Responsive search ad has varied headlines and descriptions with a call to action.
- Landing page matches the ad and loads fast.
- Search terms report and metrics checked every few days.

Landing Page and Analytics Checklist

- Headline matches the ad and states the benefit.
- Short form with only the necessary fields and a clear button.
- Testimonials, contact details and privacy link present.
- Page works well on mobile and loads quickly.
- UTM tags used on all campaign links.
- Google Analytics tag installed, tested and key events defined.
- Weekly report prepared with results, problems and next actions.

14. Tools and Resources

Learning materials, free versions of Google Search Console, Google Keyword Planner, Google Trends, the Google Analytics demo account, free email tools such as Mailchimp or Brevo, Canva for graphics, free heatmap tools, MS Excel for keyword lists, budgets and reports, MS Word and PowerPoint for documentation and presentation, Google Skillshop and platform help centres for reference, assignments and mentor feedback were used during the internship.

15. Programme at a Glance

The programme was in the domain of Digital Marketing with RKNEXORA PRIVATE LIMITED as the agency. It required a minimum of 120 hours over 28 learning days, organised in three phases: Orientation (Days 1-2), Learning and Practice (Days 3-22) and Project and Review (Days 23-28). Attendance was recorded in the Internship Attendance Log, signed by the supervisor (see Attendance Sheet).

LEARNING OUTCOME

a. Knowledge Acquired

1. Digital marketing channels, owned, paid and earned media, the marketing funnel and the steps of online strategy.
2. How search engines crawl, index and rank pages, and the elements of on-page, off-page and technical SEO.
3. How to research keywords, understand search intent and map keyword clusters to pages.
4. How to plan content, build an email list with consent, write subject lines and read email metrics.
5. How Google Ads is structured and how bidding, quality, match types, budget and negative keywords work.
6. How to integrate social media with the website using UTM tags and tracking, and how to design and test landing pages.
7. How to read Google Analytics reports, calculate key metrics such as CTR, CPA, ROAS, ROI and CAC and prepare a campaign report.

Glossary of Terms Learned

- **SEO** - Search Engine Optimisation: improving a site to rank higher in unpaid results.
- **SEM / PPC** - Search engine marketing / pay-per-click advertising.
- **SERP** - Search Engine Results Page.
- **Crawling / Indexing / Ranking** - Finding pages / storing them / ordering them for a search.
- **Title tag / Meta description** - Page title and summary shown in search results.
- **Backlink** - A link to your site from another website.
- **E-E-A-T** - Experience, Expertise, Authoritativeness, Trustworthiness.
- **Search intent** - The purpose behind a search: informational, navigational, commercial or transactional.
- **Long-tail keyword** - A longer, more specific search phrase with lower competition.
- **Content pillar / Topic cluster** - A main theme and its related pieces of content.
- **Lead magnet** - A free resource offered in exchange for contact details.
- **Open rate / CTR / CTOR** - Share of delivered emails opened / clicked / clicks as a share of opens.
- **Quality Score / Ad Rank** - Google's measures of ad quality and ad position in the auction.
- **Match types / Negative keywords** - Rules for which searches trigger ads / terms that block ads.
- **CPC / CPA / ROAS** - Cost per click / cost per acquisition / return on ad spend.
- **UTM parameters** - Tags added to a link to track the source of visits.
- **Landing page** - A page built for one specific action.
- **Conversion rate** - Conversions divided by visitors, as a percentage.
- **GA4 / Key event** - Google Analytics 4 / an important user action tracked as a conversion.
- **ROI / CAC** - Return on investment / customer acquisition cost.

b. Skills Learned

Technical skills. Researching and clustering keywords; writing title tags, meta descriptions and headings; planning content calendars and writing blog outlines; designing emails and calculating email metrics; planning Google Ads campaigns with budgets and ad copy; creating UTM links; wire-framing and A/B testing landing pages; reading Google Analytics reports; and building campaign reports with charts and recommendations in MS Excel.

Professional skills. Analytical and numerical thinking; clear and persuasive writing; customer empathy; attention to detail and proofreading; time management; ethical and legal awareness; teamwork and acceptance of feedback; and documentation, report writing and presentation.

These skills were developed through repeated practice and daily documentation. Keyword and metric work improved analytical thinking, writing titles, ads and emails improved clarity and creativity, A/B test examples improved a habit of testing before deciding, and writing remarks and reports improved communication.

c. Observed Attitude and Gained Values

1. Customer first: marketing works when it helps people find what they really need.
2. Honesty and transparency: claims, reports and results must be true, and mistakes must be shown.
3. Respect for privacy and consent: data and contact details belong to the customer.
4. Curiosity and learning: tools and rules change, and a marketer must keep learning.
5. Discipline and punctuality: regular reporting at fixed timings and daily attendance records.

d. Challenges Faced

Understanding terms and metrics such as Quality Score, CAC, key events and click-to-open rate was handled by using a glossary, worked examples in Excel and mentor guidance.

Learning several tools in a short time was handled by practising each tool on a small task the same day and keeping short step notes for revision.

Choosing the right keywords and intent was difficult at first; this was handled by studying search results, using clusters and checking the choices with the supervisor.

Working without real budgets and traffic was handled by using sample websites, demo accounts, dummy figures and clear assumptions written beside each calculation.

Maintaining consistent documentation was handled by using daily log entries and reviewing feedback to improve documentation progressively.

Managing time between practice, documentation and report writing was handled by dividing work week by week and using review days for corrections.

e. Career Pathways

The knowledge gained supports careers such as Digital Marketing Executive, SEO Executive or Analyst, Content Marketer or Writer, Email Marketing Executive, PPC or Google Ads Executive, Web Analyst, Social Media Executive, Marketing Automation Executive and Growth Marketing Executive. Opportunities exist in digital agencies, brands and start-ups, e-commerce and education companies, media houses and local businesses, and as a freelancer or consultant. Related certifications and study options include Google Skillshop certifications in Google Ads and Analytics, HubSpot Academy and Meta Blueprint courses, BBA or MBA in Marketing or Digital Marketing, and courses in Mass Communication. Because tools and algorithms change quickly, continuous learning and a portfolio of real projects are essential.

CONCLUSION

The internship in Digital Marketing was a valuable learning experience that integrated academic knowledge with practical activity. The programme achieved its objectives through structured learning, guided practice, assignments, supervisor review and documentation.

The student gained a clear understanding of how a digital campaign is planned, run and measured - through marketing fundamentals, SEO, keyword research, content marketing, email marketing, Google Ads, social media integration, landing page optimisation, web analytics and campaign reporting - and acquired practical familiarity with keyword lists, SEO audits, content calendars, email and ad metrics, UTM links, A/B tests and reports. The experience has strengthened the student's employability and provides a foundation for further study and work in marketing and communication.

Reflection

Looking back, the most useful lesson of the internship was that digital marketing is a chain, and a chain is only as strong as its weakest link. Good keywords bring the right people, a clear ad earns the click, a matching landing page earns the enquiry, tracking shows what happened and an honest report shows what to do next. The case study showed how money can be wasted when even one link is broken. Moving from concept to practice to documentation made abstract ideas concrete, and supervisor feedback showed where understanding was weak. The habit of recording each day's work also made it easier to see progress over the weeks.

Objectives and Achievement

The objective of understanding digital marketing fundamentals was achieved through concept sessions and a funnel and strategy note. The objective of learning SEO and keyword research was achieved through a page audit, a keyword list and a cluster map. The objective of learning content and email marketing was achieved through a content calendar, a blog outline and a designed email with metrics. The objective of learning Google Ads, social integration and landing pages was achieved through an ads plan, UTM links and a landing page wireframe with an A/B test plan. The objective of learning analytics and reporting was achieved through a Google Analytics demo exploration and a campaign report in Excel. The objective of developing professional discipline was achieved through daily attendance, supervisor review and report writing.

Future Scope

The knowledge gained can support further study of marketing, analytics and communication, and careers in agencies, brands, start-ups, e-commerce and education. With growing internet use in small towns, mobile and regional-language search, video, and the use of artificial intelligence in search and advertising, trained and ethical digital marketers are increasingly needed, including in Bihar.

Suggestions for Improvement of the Programme

1. Include live practice on demo websites and talks by digital marketing professionals and local business owners, with appropriate permissions.
2. Continue regular mentor feedback and progress reviews.
3. Provide more project-based activities such as running a small real campaign for a local business under supervision.
4. Encourage students to maintain detailed daily documentation.
