ACKNOWLEDGEMENT

I express my sincere gratitude to RK NEXORA, RKNEXORA PRIVATE LIMITED, _____ (College Name), my faculty mentors and the internship supervisor, _____, for their guidance and support. The structured activities, learning resources and regular feedback helped me complete this internship in Retail & Consumer Goods Management successfully.

I am thankful to the Head of the Department and the college mentor for their encouragement and for guiding me in preparing this report. I am also grateful to the management of RKNEXORA PRIVATE LIMITED for providing a professional learning environment and the opportunity to learn and apply my knowledge in a practical setting. The concept sessions, hands-on tasks with sample bills and stock sheets, and the supervisor's patient and detailed feedback helped me understand how retail stores and supply chains work behind the scenes.

Finally, I thank my family and peers for their constant encouragement throughout the programme.

PREFACE

Internships are an important part of the undergraduate programme, as they allow students to see how classroom learning is applied in real organisations. The Four-Year Undergraduate Programme (FYUGP), introduced in line with the National Education Policy 2020, gives special importance to experiential learning, skill development and employability. This report has been prepared as part of the internship requirement of Magadh University and the Higher Education guidelines applicable in Bihar.

The report describes the internship undertaken in Retail & Consumer Goods Management at RKNEXORA PRIVATE LIMITED, the plan followed, the work carried out, and the learning gained. Retail is one of the largest sectors of the Indian economy, and everyday items such as food, soap, clothes and mobile accessories reach the customer through shops, supermarkets, distributors and online platforms. Behind every sale are many tasks - stocking, display, pricing, billing, distribution, data analysis and customer service - that need trained people. This internship offered a first-hand introduction to that field.

The report has been arranged in the order suggested by the University, beginning with the cover page and acknowledgement and ending with the conclusion and attendance sheet. It is hoped that the report gives a clear and honest account of the internship experience.

EXECUTIVE SUMMARY

This report documents the internship completed in Retail & Consumer Goods Management at RKNEXORA PRIVATE LIMITED (RK NEXORA - 'Campus to Career'). The programme required a minimum of 120 hours, completed over about four to five weeks (28 working days) with daily sessions of four to five hours, and was supported by an attendance log, supervisor guidance and review.

Background. Retail is the business of selling goods to the final consumer, and consumer goods - especially fast-moving consumer goods (FMCG) - move through a chain of manufacturers, distributors, wholesalers and retailers. A retailer succeeds when the right product is available at the right place, price and time, displayed well, billed correctly and sold with good service. Retail and consumer goods management is the discipline that plans and monitors these activities. For a student from any discipline, the internship shows how marketing, accounts, logistics, data and customer care work together in a real business.

Objectives. The internship aimed to (i) build a structured understanding of retail formats, models and store operations, (ii) learn visual merchandising and inventory replenishment, (iii) study consumer behaviour, pricing and promotions, (iv) learn POS billing and FMCG distribution, (v) learn sales data analysis and customer service practices, and (vi) develop communication, documentation and professional discipline.

Work carried out. The student first studied retail formats and models and store operations, then worked through visual merchandising, inventory replenishment, consumer behaviour, pricing and promotions, POS and billing systems, FMCG distribution, sales data analysis and customer service practices. Each topic had a concept session followed by a hands-on task using sample bills, stock sheets, price lists and dummy sales data. The later part of the programme was devoted to a case study, a mock practical exercise, supervisor review and preparation of this report.

Project. The work was tied together in a project titled *Retail Store Operations & Sales Analysis*, in which store operations, inventory and consumer buying behaviour were analysed to suggest merchandising improvements.

Method. A blended method was followed - learn, practise, document and review - supported by a daily attendance log with day-wise remarks and regular feedback from the supervisor.

Learning gained. The student gained a clear understanding of how retail stores and distribution chains work, practical familiarity with billing, stock registers, price and margin calculation, display planning and sales analysis in MS Excel, awareness of consumer rights and pricing rules, and improved communication, courtesy and professional discipline.

Key observations. Accurate stock and billing records are the base of a well-run store; display, price and availability strongly influence what customers buy; and data from daily sales helps decide what to stock, promote and reorder.

Conclusion. The internship met its objectives and contributed to the student's academic understanding, employability and confidence. The report follows the University's suggestive format: cover page, acknowledgement, certificate, contents, preface, executive summary, about the agency, plan and execution, learning outcome, conclusion and attendance sheet.

ABOUT THE AGENCY

RK NEXORA, a unit of RKNEXORA PRIVATE LIMITED, provides structured internship and skill-development programmes under the theme 'Campus to Career'. The organization focuses on academic-industry alignment, practical exposure, assessment, documentation and employability-oriented learning.

Particulars	Details
Name of Agency	RKNEXORA PRIVATE LIMITED
Programme / Unit	RK NEXORA - Campus to Career
Registered Office	C/O Mukesh Kumar, Khiri, PS Atri, Jethiyan, Atri, Gaya - 805236, Bihar, India
CIN	U85499BR2026PTC086757
Email	rknexorapvtltd@gmail.com
Website	www.rknexora.org
Internship Topic	Retail & Consumer Goods Management

1. Vision

To support students in developing practical, professional and industry-relevant capabilities.

2. Mission

To deliver structured learning experiences that connect academic knowledge with workplace expectations.

3. Activities of the Agency

1. Structured internship programmes aligned with university and higher-education requirements.
2. Skill-development learning modules, practical activities and assignments.
3. Attendance tracking, supervision, assessment and documentation.
4. Employability-oriented guidance connecting campus learning to career readiness.

4. Programme Structure

The internship programme is organised around a fixed number of learning hours, completed over a defined period. Each intern is registered on the internship portal with a unique registration number, is assigned a supervisor, follows a day-wise plan and maintains an attendance log. Learning is organised into three phases: **Orientation** (Days 1-2), **Learning and Practice** (Days 3-22, ten sub-topics of two days each: one concept day and one hands-on day) and **Project and Review** (Days 23-28), followed by a concluding review.

5. Role of the Supervisor

The internship supervisor assigned by the agency guided the student through the programme, explained concepts, assigned practice tasks, reviewed the daily log and gave feedback. The supervisor also verified attendance and reviewed the student's work at the end of the programme.

PLAN AND EXECUTION

1. Objectives

The internship was planned around the following objectives, each linked to a part of the programme:

1. Understand Retail & Consumer Goods Management - retail formats, models, channels and the retail value chain (Week 1).
2. Learn store operations - opening and closing routine, stock arrangement, billing counter and staff duties (Week 1).
3. Learn visual merchandising and inventory replenishment - display, layout, shelf planning, stock levels and reorder points (Week 2).
4. Study consumer behaviour, pricing and promotions - buying patterns, motives, pricing methods, discounts and offers (Weeks 2-3).
5. Learn POS and billing systems and FMCG distribution - barcode billing, payment modes, channels, distributors and supply routes (Week 3).
6. Learn sales data analysis and customer service practices - reports, trends, fast and slow movers, queries, returns and complaints (Week 4).
7. Develop professional discipline - communication, courtesy, accuracy, documentation and report writing (throughout).

2. Methodology

The programme followed a blended method made up of four connected steps, repeated for each topic:

Learn. Each topic began with a concept session in which the supervisor explained the purpose of the function, its main records and how it connects with other store and supply chain activities. Notes were prepared in the student's own words.

Practise. The concepts were then applied in guided hands-on tasks - preparing opening and closing checklists, drawing shelf plans, maintaining sample stock registers, calculating reorder points, price and margin, preparing sample bills, mapping distribution routes and analysing dummy sales data in MS Excel. Only sample or dummy data were used, so that no real customer or business information was handled.

Document. Every day's work was recorded in the internship attendance log with a short remark, and sheets and checklists were saved so that the work could be reviewed.

Review. The supervisor reviewed the work, pointed out errors and suggested improvements. Review days, a case study and a mock practical exercise helped to consolidate the learning.

3. Understanding Retail & Consumer Goods Management - Concepts Studied

3.1 What is retail and consumer goods management. Retail is the sale of goods and services in small quantities to the final consumer for personal use. Consumer goods are products bought by individuals and households. They are commonly grouped as FMCG (fast-moving consumer goods such as food, toiletries and household care, bought often and used quickly), consumer durables (such as appliances and electronics) and apparel, footwear and lifestyle products. Retail and consumer goods management is the planning and control of product range, stock, store operations, pricing, promotion, distribution and customer service so that goods reach the consumer profitably.

3.2 Retail formats and business models. Retail takes many forms, shown below. A large part of Indian retail is still unorganised (small independent shops), while organised retail (chains, malls and online platforms) is growing.

Format	Main features
Kirana / general store	Small neighbourhood shop; personal service, credit and wide local reach
Convenience store	Small, long opening hours, limited range of daily-need items
Supermarket	Self-service store selling groceries and household goods
Hypermarket	Very large store combining groceries, apparel and general merchandise
Department store	Many departments (clothing, home, beauty) under one roof
Specialty / exclusive brand store	Focus on one category or one brand
Discount / value store	Low prices through volume and limited services
E-commerce and quick commerce	Online ordering with delivery; quick commerce delivers in minutes from local dark stores
Cash and carry / wholesale	Sells in bulk, mainly to retailers and institutions

Business models include company-owned stores, franchise stores (a brand owner allows another party to run a store under its name), multi-brand outlets, direct-to-consumer (D2C) selling by brands through their own websites, and omnichannel retail that joins store, website and app so that the customer can buy and return across channels.

3.3 Retail value chain. For most FMCG products, goods flow from the manufacturer to a carrying and forwarding (C&F) agent or depot, then to a distributor or super stockist, then to wholesalers or directly to retailers, and finally to the consumer. Money and information flow back along the same chain. Channels are commonly described as general trade (traditional shops), modern trade (supermarkets and chains), e-commerce and institutional sales.

3.4 Store operations. Store operations cover the daily routine that keeps a store working. Opening includes cleaning, switching on lights and equipment, counting the cash float, checking prices and stock, and logging in to the billing system. Closing includes cash reconciliation, the day-end sales report, security of stock and locking up. Staff roles include the store manager, sales associates, cashiers, stock and replenishment staff and security. Stock arrangement follows rules such as first-in first-out (FIFO) or first-expiry first-out (FEFO), keeping heavy items low, and clear labels. Shrinkage is the loss of stock through theft, damage, expiry and counting or billing errors, and is controlled by regular stock counts and good record keeping.

3.5 Visual merchandising. Visual merchandising is the planning of how products are displayed so that customers notice them and find them easily. Main elements are store layout (grid, loop or free-flow), the planogram (a diagram showing where each product goes on a shelf), eye-level and waist-level shelves, which are usually the best selling positions, end-of-aisle displays, window displays, lighting, colour, signage and price tags. Cross-merchandising places related items together (for example tea with biscuits), and small impulse items are kept near the billing counter. A good display is clean, full, well labelled and refreshed regularly.

3.6 Inventory replenishment. Replenishment means ordering new stock before the old stock runs out, without ordering too much. Key ideas are the reorder point (stock level at which a new order is placed), safety stock (extra stock kept for uncertainty), lead time (days between order and delivery), minimum-maximum levels, and ABC analysis, which classes items by their value share. A purchase order (PO) is sent to the supplier, goods are checked against a Goods Received Note (GRN), and damaged or short goods are recorded for return or credit. Too little stock causes stock-outs and lost sales; too much stock blocks money and causes expiry and damage.

3.7 Consumer behaviour. Consumer behaviour is the study of why and how people buy. Buying is influenced by cultural factors (festivals, region, tradition), social factors (family, friends, social media), personal factors (age, income, occupation) and psychological factors (needs, perception, attitude). The buying process has five stages: need recognition, information search, evaluation of options, purchase and post-purchase feeling. Purchases may be planned or impulse. Retailers learn about buyers through observation, short surveys, feedback and sales data, and use the findings to decide range, display and offers.

3.8 Pricing and promotions. Common pricing methods are cost-plus (cost plus a margin), competitive pricing (based on rivals' prices) and psychological pricing (for example Rs. 99 instead of Rs. 100). Markup is the profit as a percentage of cost, and margin is the profit as a percentage of selling price. Promotions include discounts, buy-one-get-one offers, combo packs, coupons, loyalty points and festival sales, and are judged by the extra sales and profit they bring. Under the Legal Metrology (Packaged Commodities) Rules, 2011, the Maximum Retail Price (MRP) printed on a pre-packed product includes all taxes and cannot be exceeded; promotional claims must not mislead customers.

3.9 POS and billing systems. A Point of Sale (POS) system records each sale. It usually includes billing software, a barcode scanner, a receipt printer, a cash drawer and a card or UPI payment device. Each product has a stock keeping unit (SKU) and a barcode (commonly EAN-13); scanning it brings up the price and updates stock automatically. The bill shows item, quantity, price, discount, tax and payment mode. Payment modes include cash, cards, UPI and wallets. Returns and exchanges are recorded with the original bill, and a day-end closing report matches the system total with cash and digital receipts. Customer details collected for loyalty programmes must be protected under the Digital Personal Data Protection Act, 2023.

3.10 FMCG distribution. FMCG companies reach thousands of outlets through distributors who hold stock and supply retailers on fixed routes called beats. Primary sales are sales from the company to the distributor; secondary sales are from the distributor to retailers. Sales officers and merchandisers visit outlets to take orders, check stock, place display material and explain trade schemes. Common measures are outlet coverage, fill rate (share of ordered quantity delivered) and on-time delivery. Products with short shelf life, such as dairy and bakery, need fast movement and careful handling, and some need cold chain storage.

3.11 Sales data analysis. Daily bills and stock records can be turned into useful information with simple analysis, for example in MS Excel using sorting, filters, formulas, pivot tables and charts. Reports show sales by day, category and item; trends and seasonality; and fast and slow movers. The analysis guides decisions on what to reorder, promote, move on the shelf or stop stocking.

3.12 Customer service practices. Good service means greeting customers, understanding their needs, giving correct information, billing accurately and handling returns and complaints politely. A simple model for handling a complaint is LAST: Listen, Apologise, Solve and Thank. The Consumer Protection Act, 2019 gives consumers rights to safety, information, choice, being heard, redressal and consumer education, and provides District, State and National Consumer Commissions for disputes; the National Consumer Helpline (1915) helps consumers with complaints. A clear returns and exchange policy, shown at the counter, avoids disputes.

3.13 Key performance indicators (KPIs). Store managers track simple numbers to judge performance:

Indicator	Meaning / Formula	Why it matters
Average Bill Value (ABV)	Total sales / Number of bills	Shows how much a customer spends per visit
Units per Transaction (UPT)	Units sold / Number of bills	Shows how many items a customer buys
Conversion Rate	(Bills / Footfall) x 100	Shows how many visitors buy
Stock Turnover	Cost of goods sold / Average inventory	Shows how fast stock is sold
Gross Margin %	(Sales - Cost of goods) / Sales x 100	Shows profit on sales before expenses

Indicator	Meaning / Formula	Why it matters
Shrinkage %	(Book stock - Physical stock) / Sales x 100	Shows loss of stock
Sales per sq. ft.	Sales / Selling area in sq. ft.	Shows how well space is used

3.14 Limitations and care needed. Retail depends on accurate stock records, correct prices, trained staff and good supplier relations. Seasonality, changing tastes, competition from online platforms, expiry and theft can reduce profit, and mistakes in pricing or billing directly affect customers.

4. Week-wise Plan and Execution

Week	Days	Activities
Week 1	Days 1-6	Orientation and foundations: company induction, introduction to retail and consumer goods management, retail formats and models, and store operations.
Week 2	Days 7-12	Display, stock and customer: visual merchandising, inventory replenishment and consumer behaviour study, each with a concept session and a hands-on task.
Week 3	Days 13-18	Price, billing and supply: pricing and promotions, POS and billing systems, and FMCG distribution.
Week 4	Days 19-24	Analysis and application: sales data analysis, customer service practices, a case study exercise and a mock practical exercise.
Week 5	Days 25-28	Project closure: supervisor review and feedback, internship report drafting, presentation preparation and final review.

5. Week-wise Narrative

Week 1: The first week was devoted to orientation and foundations. After company induction, the student was introduced to retail and consumer goods management and studied store formats, retail channels and business models. The week ended with a study of store operations - opening and closing routine, stock arrangement, the billing counter and staff duties.

Week 2: In the second week the study moved to visual merchandising - product display, layout, shelf planning and window presentation - followed by inventory replenishment, including stock levels, reorder points and replenishment orders, and a study of consumer behaviour, buying patterns, motives and preferences.

Week 3: The third week focused on pricing methods, discounts, offers and promotional schemes; POS billing, barcode scanning, payment modes and sales receipts; and FMCG distribution channels, distributors, retailers and supply routes.

Week 4: In the fourth week the student studied sales data analysis - reports, trends and fast and slow moving items - and customer service practices, including service standards, handling queries, returns and complaints. A case study exercise and a mock practical exercise were completed in this week.

Week 5: The last week was devoted to project closure: supervisor review and feedback, drafting of the internship report, preparation of a presentation and final review before submission.

6. Topic-wise Learning in Detail

6.1 Retail Formats & Models and Store Operations

Concept: Store formats, retail channels and business models; opening and closing routine, stock arrangement, billing counter and staff duties.

Practice carried out: Preparing a comparison chart of retail formats; drafting store opening and closing checklists; noting the daily duties of each staff role.

6.2 Visual Merchandising

Concept: Product display, store layout, shelf planning and window presentation, including planogram, eye-level placement and cross-merchandising.

Practice carried out: Drawing a sample shelf plan for a small category; listing display improvements for a sample store layout.

6.3 Inventory Replenishment

Concept: Stock levels, reorder points, safety stock and replenishment orders; stock receiving with PO and GRN; expiry and FIFO / FEFO.

Practice carried out: Maintaining a sample stock register; calculating reorder points; preparing a sample replenishment order.

6.4 Consumer Behaviour Study

Concept: Buying patterns, motives, preferences and factors affecting purchase; the five-stage buying process.

Practice carried out: Preparing a short sample customer questionnaire and summarising dummy responses.

6.5 Pricing & Promotions and POS & Billing Systems

Concept: Pricing methods, margin and markup, discounts, offers and promotional schemes; POS billing, barcode scanning, payment modes and sales receipts.

Practice carried out: Calculating selling price, margin and discount; preparing sample bills with item, tax and payment mode; completing a sample day-end closing sheet.

6.6 FMCG Distribution, Sales Data Analysis and Customer Service

Concept: Distribution channels, distributors, retailers and supply routes; sales reports, trends and fast and slow movers; service standards, handling queries, returns and complaints.

Practice carried out: Mapping a sample distribution route; analysing dummy sales data in MS Excel; role-play of query, return and complaint situations.

7. Rules, Rights and Good Practice - Key Points Studied

Important laws and rules (introductory awareness).

Law / Rule	Relevance to retail
Consumer Protection Act, 2019	Consumer rights, unfair trade practices, misleading advertisements and redressal
Legal Metrology Act, 2009 and Packaged Commodities Rules, 2011	Weights, measures and mandatory labelling, including MRP
Food Safety and Standards Act, 2006 (FSSAI)	Licence, hygiene and labelling for food items
GST Acts, 2017	Tax on sale of goods; tax invoice and returns
Bureau of Indian Standards (BIS) certification	Quality marks such as ISI on notified products
Trade Marks Act, 1999	Protection of brand names; sale of counterfeit goods is prohibited
Digital Personal Data Protection Act, 2023	Protection of customer data collected at the store
State Shops and Establishments law	Registration, working hours and staff conditions for shops

Good retail practice. Display correct prices, never charge above MRP, sell only unexpired goods, keep the store clean and safe, issue a proper bill for every sale and respect every customer.

Ethics. Honest pricing and description, fair treatment of suppliers, protection of customer information and no sale of fake or unsafe goods are basic duties of a retailer.

8. Process Flows Studied

Process mapping was used to understand how goods and information move through a store and its supply chain and who is responsible at each step.

Process	Steps
Store Day Cycle	Opening checks > Stock display > Customer sales > Replenishment of shelves > Closing reconciliation > Day-end report
Replenishment	Stock check > Reorder point reached > Purchase order > Goods received and GRN > Shelf filling > Record updated
Customer Purchase	Product selection > Billing at POS > Payment > Bill / receipt > Exit or return
FMCG Distribution	Company > C&F agent / depot > Distributor > Retailer > Consumer
Sales Analysis	Collect bills > Clean and enter data > Summarise by item and category > Find trends > Decide action
Customer Complaint	Complaint received > Listen and apologise > Solve or escalate > Follow up > Record and learn

9. Worked Examples with Sample (Dummy) Data

Example A: Daily store KPIs (dummy figures). A store has 600 visitors in a day and makes 150 bills with total sales of Rs. 45,000 and 420 units sold. Average Bill Value = 45,000 / 150 = Rs. 300. Units per Transaction = 420 / 150 = 2.8. Conversion Rate = 150 / 600 x 100 = 25%.

Example B: Markup and margin (dummy figures). An item costs Rs. 80 and is sold for Rs. 100. Profit = Rs. 20. Markup = 20 / 80 x 100 = 25% of cost. Margin = 20 / 100 x 100 = 20% of selling price.

Example C: Selling price after discount (dummy figures). An item has an MRP of Rs. 200 and a purchase cost of Rs. 150. A 10% discount gives a selling price of Rs. 180. Profit = 180 - 150 = Rs. 30, which is 30 / 180 = about 16.7% margin. The selling price stays below MRP, as the rules require.

Example D: Reorder point (dummy figures). A sample item sells 12 units a day, supplier lead time is 4 days and safety stock is 20 units. Reorder point = (12 x 4) + 20 = 68 units. When stock reaches 68 units, a new purchase order is placed.

Example E: Stock turnover (dummy figures). Cost of goods sold in a year is Rs. 6,00,000 and average inventory is Rs. 1,00,000. Stock turnover = 6,00,000 / 1,00,000 = 6 times a year, which means stock stays about 365 / 6 = 61 days.

Example F: Fast and slow movers (dummy data). Sales of sample items for one week were arranged from highest to lowest:

Item (dummy)	Units sold	Stock left	Action suggested
Packet tea 250 g	120	15	Fast mover: reorder now, keep at eye level
Biscuit family pack	95	40	Fast mover: keep stock; place near tea
Instant noodles 4-pack	60	55	Medium: keep regular display
Hair oil 200 ml	18	70	Slow mover: run a combo offer

Item (dummy)	Units sold	Stock left	Action suggested
Detergent bar (large)	6	80	Slow mover: reduce order, review range

Example G: Sample bill (dummy figures).

Item	Quantity	Rate (Rs.)	Amount (Rs.)
Packet tea 250 g	2	110	220
Biscuit family pack	1	60	60
Instant noodles 4-pack	1	70	70
Discount (loyalty offer)			-20
Total payable (UPI)			330

10. Project: Retail Store Operations & Sales Analysis

Scope. The internship work was organised around a project in which store operations, inventory and consumer buying behaviour were analysed to suggest merchandising improvements, using sample sheets and dummy data.

Steps followed. (i) Studied store formats and daily operations; (ii) prepared opening and closing checklists and a sample shelf plan; (iii) maintained a sample stock register and calculated reorder points; (iv) prepared a short customer survey and summarised dummy responses; (v) analysed dummy sales data in MS Excel to find fast and slow movers; (vi) suggested merchandising improvements and reviewed the work with the supervisor.

Skills and tools. Retail Operations, Visual Merchandising, Inventory Replenishment, POS Billing, Sales Analysis, MS Excel.

Outputs. Checklists, shelf plan, stock register, reorder sheet, sales analysis workbook, list of merchandising suggestions, and this internship report.

11. Case Study Exercise: Stock-outs and Slow Stock in a Neighbourhood Supermarket

A case study exercise was completed on a typical store problem. The store and figures are illustrative and not taken from any real business.

Part	Details
Background	A neighbourhood supermarket of about 2,000 sq. ft. serves around 400 customers a day. Sales have stayed flat for six months although footfall is steady.
Problem observed	Popular items such as tea and biscuits are often out of stock, while slow items such as large detergent bars fill the shelves. Fast items are kept on the bottom shelf, the entrance is cluttered, and the evening billing queue is long.
Analysis	Orders are placed from memory without a reorder point, so fast items run out and slow items are over-ordered. Shelf positions do not follow sales. One billing counter is used even at peak hours, so some customers leave without buying.
Recommendations	(1) Set reorder points for fast items using weekly sales. (2) Reduce orders for slow items and run combo offers. (3) Move fast items to eye level and keep related items together. (4) Clear the entrance and add a second counter at peak hours. (5) Review weekly sales and stock every week.
Expected result	Fewer stock-outs, less blocked money, higher conversion and a better shopping experience.
Lesson learned	Simple data on sales and stock, used every week, improves ordering, display and service together.

12. Mock Practical Exercise: One Week in a Store

In the mock practical exercise the student handled the main steps of a sample (dummy) store week, using the sheets, calculations and checklists practised earlier.

Step	Task	Document prepared / checked	Area
1	Opening routine	Opening checklist: cleaning, cash float, price tags and POS login	Store operations
2	Receiving stock	GRN checked against purchase order; expiry and damage noted	Inventory
3	Display	Shelf plan updated; fast items moved to eye level; price tags checked	Visual merchandising
4	Selling and billing	Sample bills prepared with discount and payment mode	POS and billing
5	Customer service	One query, one return and one complaint handled with the LAST method	Customer service
6	Replenishment	Weekly sales used to calculate reorder points and prepare a purchase order	Inventory
7	Closing and report	Day-end sales total matched with cash and digital receipts	Store operations
8	Sales review	Fast and slow movers listed; promotion and display actions suggested	Sales analysis

The exercise showed that store tasks are linked: stock records decide ordering, ordering decides availability, availability and display decide sales, and sales data decides the next order.

13. Sample Checklists Prepared

Checklists were prepared as part of the hands-on tasks. They reduce errors and make routine work easier to review.

Store Opening Checklist	Store Closing Checklist
Store cleaned and lights, AC and equipment on	Last customers served and entry closed
Cash float counted and recorded	POS day-end report taken
POS system and barcode scanner tested	Cash and digital receipts matched with system total
Shelves filled and fronted; prices checked	Shelves tidied and fast items refilled for next day
Expired and damaged goods removed	Expired and damaged goods separated and recorded
Offers and signage updated	Cash locked in safe or deposited
Staff roles and targets briefed	Lights and equipment off; store locked and alarm set

Stock Receiving (GRN) Checklist	Display and Merchandising Checklist
Delivery matched with purchase order	Fast items at eye level and well stocked
Quantity counted and recorded	Related items kept together
Damage and packing checked	Price tag shown clearly for every item
Batch number and expiry date checked	Products faced forward and shelves clean
MRP and barcode verified	Offers and signage visible and correct
GRN prepared and stock register updated	Entrance and aisles clear and safe
Old stock placed in front (FIFO / FEFO)	Impulse items placed near the billing counter

14. Tools and Resources

Learning materials, sample bills, stock registers and price lists, MS Excel for stock, margin and sales analysis, MS Word and PowerPoint for documentation and presentation, demo POS and billing screens, shelf planning templates, Legal Metrology and consumer protection reference material, assignments and mentor feedback were used during the internship.

15. Programme at a Glance

Particulars	Details
Domain	Retail & Consumer Goods Management
Agency	RKNEXORA PRIVATE LIMITED
Minimum hours required	120
Learning days planned	28
Phases	Orientation (Days 1-2); Learning and Practice (Days 3-22); Project and Review (Days 23-28)
Record of attendance	Internship Attendance Log, signed by the supervisor (see Attendance Sheet)

LEARNING OUTCOME

a. Knowledge Acquired

1. Retail formats, business models, channels and the retail value chain from manufacturer to consumer.
2. Daily store operations, including opening and closing routine, stock arrangement, billing counter and staff duties.
3. Visual merchandising, including layout, planogram, shelf placement and cross-merchandising.
4. Inventory replenishment, including reorder point, safety stock, PO, GRN, FIFO / FEFO and stock turnover.
5. Consumer behaviour, pricing methods, margin and markup, and how discounts and promotions are planned and judged.
6. POS billing, payment modes and FMCG distribution, including distributors, beats, primary and secondary sales.
7. Sales data analysis in MS Excel, customer service practices, and consumer rights and basic retail rules such as MRP.

Glossary of Terms Learned

Term	Meaning
FMCG	Fast-moving consumer goods - products bought often and used quickly
SKU	Stock keeping unit - unique code for each product variant
MRP	Maximum Retail Price printed on a pre-packed product, inclusive of all taxes
Planogram	Diagram showing where each product is placed on a shelf
Visual merchandising	Planning and arranging displays to attract and guide customers
Cross-merchandising	Placing related products together to increase sales
Reorder point	Stock level at which a new order is placed
Safety stock	Extra stock kept to cover uncertainty in demand or delivery
Lead time	Time between placing an order and receiving the goods
PO / GRN	Purchase Order sent to supplier / Goods Received Note made on receipt
FIFO / FEFO	First-in first-out / first-expiry first-out stock issue
Shrinkage	Loss of stock through theft, damage, expiry or errors
POS	Point of Sale - system that records and bills each sale
Footfall	Number of visitors entering a store
ABV / UPT	Average Bill Value / Units Per Transaction
Markup / Margin	Profit as a percentage of cost / of selling price
Beat	Fixed route on which a salesperson or distributor serves outlets
Primary / Secondary sales	Sales from company to distributor / from distributor to retailer
Omnichannel	Selling through stores, website and app in a joined-up way

b. Skills Learned

Technical Skills	Professional Skills
Store opening and closing routine	Customer service and communication
Shelf planning and visual merchandising	Courtesy and complaint handling
Stock register and reorder point calculation	Attention to detail and accuracy
POS billing and payment handling	Time management and teamwork
Price, margin and discount calculation	Analytical and problem-solving thinking
Sales analysis using MS Excel	Documentation, report writing and presentation

These skills were developed through repeated practice and daily documentation. Calculating margins and reorder points improved accuracy, analysing sales data improved analytical thinking, role-play improved confidence with customers, and writing remarks and reports improved communication.

c. Observed Attitude and Gained Values

1. Honesty in pricing and billing: customers must be charged correctly and never above MRP.
2. Customer focus and courtesy: every customer must be treated with respect and patience.
3. Accuracy and responsibility: a small error in a bill, stock count or price affects the customer and the business.
4. Discipline and punctuality: regular reporting at fixed timings and daily attendance records.
5. Teamwork: a store works well only when sales, stock and billing staff coordinate.

d. Challenges Faced

Challenges Faced	How They Were Handled
Understanding terms such as planogram, SKU, GRN and secondary sales.	Used a glossary, reference material and mentor guidance.
Calculating margin, markup and reorder point correctly.	Used MS Excel formulas and checked results with the supervisor.
Deciding display positions without real store data.	Used dummy sales data and shelf-plan templates, then reviewed with the supervisor.
Handling difficult customer situations in role-play.	Practised the LAST method and took feedback after each role-play.
Maintaining consistent documentation.	Used daily log entries and reviewed feedback to improve documentation progressively.
Managing time between practice, documentation and report writing.	Divided work week by week and used review days for corrections.

e. Career Pathways

The knowledge gained supports further study and careers such as Store Manager trainee, Sales Associate, Visual Merchandiser, Inventory or Replenishment Executive, Category or Merchandise Planning assistant, FMCG Sales Officer or Territory Sales Executive, POS and Billing Executive, Retail Data Analyst and Customer Service Executive. Related higher-study options include BBA or MBA in Retail Management, Marketing or Supply Chain, and certificate courses in merchandising and sales analytics. Growth of organised retail, e-commerce, quick commerce and FMCG distribution increases the need for trained people, including in smaller cities.

CONCLUSION

The internship in Retail & Consumer Goods Management was a valuable learning experience that integrated academic knowledge with practical activity. The programme achieved its objectives through structured learning, guided practice, assignments, supervisor review and documentation.

The student gained a clear understanding of how retail stores and consumer goods supply chains work - through store operations, visual merchandising, inventory replenishment, consumer behaviour, pricing, POS billing, FMCG distribution, sales analysis and customer service - and acquired practical familiarity with bills, stock registers, margin calculations, shelf plans and sales sheets. The experience has strengthened the student's employability and provides a foundation for further study and work in retail, sales and distribution.

Reflection

Looking back, the most useful lesson of the internship was that retail success comes from small things done well every day: correct stock, clear display, right price, accurate bill and polite service. Moving from concept to practice to documentation made abstract ideas concrete, and supervisor feedback showed where understanding was weak. The habit of recording each day's work also made it easier to see progress over the weeks.

Objectives and Achievement

Objective	How it was achieved
Understand retail and store operations	Concept sessions, format comparison chart and opening / closing checklists
Learn merchandising and replenishment	Shelf plan, stock register and reorder point calculations
Study consumer behaviour, pricing and promotions	Sample survey, margin and discount calculations
Learn POS billing and FMCG distribution	Sample bills, day-end sheet and route mapping
Learn sales analysis and customer service	MS Excel analysis of dummy sales and role-play of queries and complaints
Develop professional discipline	Daily attendance, supervisor review and report writing

Future Scope

The knowledge gained can support further study of retail, marketing and supply chain management, and careers in retail chains, FMCG companies, distributors, e-commerce firms and own business. With growing organised retail, digital payments and online shopping, trained retail professionals are increasingly needed.

Suggestions for Improvement of the Programme

1. Include store visits and talks by retail managers or FMCG sales professionals, with appropriate permissions.
2. Continue regular mentor feedback and progress reviews.
3. Provide more project-based activities such as planning the layout of a small mock store.
4. Encourage students to maintain detailed daily documentation.
