Signature of Student **Seal & Signature of IPO**

ACKNOWLEDGEMENT

I express my sincere gratitude to RK NEXORA, RKNEXORA PRIVATE LIMITED, _____ (College Name), my faculty mentors and the internship supervisor, _____, for their guidance and support. The structured activities, learning resources and regular feedback helped me complete this internship in Customer Relationship Management (CRM) successfully.

I am thankful to the Head of the Department and the college mentor for their encouragement and for guiding me in preparing this report. I am also grateful to the management of RKNEXORA PRIVATE LIMITED for providing a professional learning environment and the opportunity to learn and apply my knowledge in a practical setting. The concept sessions, hands-on tasks with sample data and case studies, and the supervisor's patient and detailed feedback helped me understand how businesses attract, serve and keep their customers with the help of a CRM system.

Finally, I thank my family and peers for their constant encouragement throughout the programme.

PREFACE

Internships are an important part of the undergraduate programme, as they allow students to see how classroom learning is applied in real organisations. The Four-Year Undergraduate Programme (FYUGP), introduced in line with the National Education Policy 2020, gives special importance to experiential learning, skill development and employability. This report has been prepared as part of the internship requirement of Magadh University and the Higher Education guidelines applicable in Bihar.

The report describes the internship undertaken in Customer Relationship Management (CRM) at RKNEXORA PRIVATE LIMITED, the plan followed, the work carried out, and the learning gained. Every business depends on its customers, and keeping an existing customer is usually cheaper than finding a new one. A local jeweller, a coaching centre, an online store and a bank all need to know who their customers are, what they bought, what they asked for and when to contact them again. Customer Relationship Management (CRM) is the discipline - and the software - that records every contact with a customer in one place so that the whole organisation can serve the customer better. This report describes how the concepts of CRM were studied and how a CRM set-up for a fictitious business was designed and practised end to end, from the first lead to the repeat customer, using dummy data.

The report has been arranged in the order suggested by the University, beginning with the cover page and acknowledgement and ending with the conclusion and attendance sheet. It is hoped that it gives a clear and honest account of the internship experience. All examples in this report use dummy data and fictitious names; no real personal or business information has been handled.

EXECUTIVE SUMMARY

This report documents the internship completed in Customer Relationship Management (CRM) at RKNEXORA PRIVATE LIMITED (RK NEXORA - 'Campus to Career'). The programme required a minimum of 120 hours, completed over about four to five weeks (28 working days) with daily sessions of four to five hours, and was supported by an attendance log, supervisor guidance and review.

Background. Customer Relationship Management is a strategy and a set of tools for managing the interactions of a business with its present and future customers. A CRM system stores contacts, accounts, leads, deals, tickets, emails and notes in one database, shows the stage of every sale, reminds staff to follow up, automates routine emails and produces reports. Its purpose is to increase sales, improve service and build loyalty. CRM is commonly classified as operational (automating sales, marketing and service), analytical (studying customer data) and collaborative (sharing customer information between teams and partners).

Objectives. The internship aimed to (i) understand CRM concepts and its three types, (ii) learn lead capture, qualification, scoring and assignment, (iii) manage contact and account records, (iv) track deals in a sales pipeline and forecast sales, (v) handle customer support tickets, (vi) design email campaigns and automation, (vii) segment customers, (viii) read CRM reports and dashboards, (ix) study customer retention strategies, and (x) practise the whole customer lifecycle in a CRM tool.

Work carried out. Each topic had a concept session followed by a hands-on task in which dummy leads, contacts, deals and tickets were created and managed in a CRM tool and in spreadsheets that imitate it. The student captured and scored leads, moved deals through a pipeline, resolved tickets, wrote email templates, grouped customers into segments, prepared reports and designed a retention plan. The later part of the programme was devoted to the project, a case study exercise, a mock practical exercise, supervisor review and preparation of this report.

Project. The work was tied together in a project titled **CRM Setup & Customer Lifecycle Project**. The project set up a CRM for a fictitious tuition and coaching centre, Gyan Deep Classes, in Gaya: the lead sources, the stages of admission, the customer fields, the ticket categories and the reports were designed, 200 dummy leads were followed through the pipeline, and a customer retention plan was prepared.

Method. A blended method was followed - learn, practise, document and review - supported by a daily attendance log with day-wise remarks and regular feedback from the supervisor.

Learning gained. The student gained a clear understanding of CRM concepts, practical skill in lead management, contact and account records, pipeline tracking, ticketing, email automation, segmentation, reports and dashboards, and the ability to calculate simple CRM measures such as conversion rate, customer lifetime value and churn.

Key observations. A CRM tool works only when the data in it is complete and up to date; every follow-up that is not recorded is a lost opportunity; good service and quick response matter as much as the product; and loyalty is built by many small, consistent experiences and not by a single offer.

Conclusion. The internship met its objectives and contributed to the student's academic understanding, employability and confidence. The report follows the University's suggestive format: cover page, acknowledgement, certificate, contents, preface, executive summary, about the agency, plan and execution, learning outcome, conclusion and attendance sheet.

ABOUT THE AGENCY

RK NEXORA, a unit of RKNEXORA PRIVATE LIMITED, provides structured internship and skill-development programmes under the theme 'Campus to Career'. The organization focuses on academic-industry alignment, practical exposure, assessment, documentation and employability-oriented learning.

Particulars	Details
Name of Agency	RKNEXORA PRIVATE LIMITED
Programme / Unit	RK NEXORA - Campus to Career
Registered Office	C/O Mukesh Kumar, Khiri, PS Atri, Jethiyan, Atri, Gaya - 805236, Bihar, India
CIN	U85499BR2026PTC086757
Email	rknexorapvtltd@gmail.com
Website	www.rknexora.org
Internship Topic	Customer Relationship Management (CRM)

1. Vision

To support students in developing practical, professional and industry-relevant capabilities.

2. Mission

To deliver structured learning experiences that connect academic knowledge with workplace expectations.

3. Activities of the Agency

1. Structured internship programmes aligned with university and higher-education requirements.
2. Skill-development learning modules, practical activities and assignments.
3. Attendance tracking, supervision, assessment and documentation.
4. Employability-oriented guidance connecting campus learning to career readiness.

4. Programme Structure

The internship programme is organised around a fixed number of learning hours, completed over a defined period. Each intern is registered on the internship portal with a unique registration number, is assigned a supervisor, follows a day-wise plan and maintains an attendance log. Learning is organised into three phases: **Orientation** (Days 1-2), **Learning and Practice** (Days 3-22, ten sub-topics of two days each: one concept day and one hands-on day) and **Project and Review** (Days 23-28), followed by a concluding review.

5. Role of the Supervisor

The internship supervisor assigned by the agency guided the student through the programme, explained concepts, assigned practice tasks, reviewed the daily log and gave feedback. The supervisor also verified attendance and reviewed the student's work at the end of the programme.

PLAN AND EXECUTION

1. Objectives

The internship was planned around the following objectives, each linked to a part of the programme:

1. Understand CRM - meaning, benefits and its operational, analytical and collaborative types (Week 1).
2. Learn lead management - capture, qualification, scoring and assignment (Week 1-2).
3. Manage contact and account records, and track deals in a sales pipeline with forecasting (Week 2).
4. Handle support tickets and understand service levels (Week 3).
5. Learn email campaign automation and customer segmentation (Week 3).
6. Read CRM reports and dashboards, and study retention strategies (Week 4).
7. Practise the whole customer lifecycle in a CRM tool and complete the project (Weeks 4-5).

2. Methodology

The programme followed a blended method made up of four connected steps, repeated for each topic:

Learn. Each topic began with a concept session in which the supervisor explained the idea, its main terms and how it is used in real organisations. Notes were prepared in the student's own words.

Practise. The concepts were then applied in guided hands-on tasks - creating lead and contact records, scoring leads, moving deals through a pipeline, writing email templates, creating and closing support tickets, grouping customers into segments, calculating conversion rate and customer lifetime value, and building a simple CRM report in MS Excel. Only sample data and fictitious examples were used, so that no real personal or business information was handled.

Document. Every day's work was recorded in the internship attendance log with a short remark, and sheets, files and screenshots were saved so that the work could be reviewed.

Review. The supervisor reviewed the work, pointed out errors and suggested improvements. Review days, a case study and a mock practical exercise helped to consolidate the learning.

3. Understanding Customer Relationship Management (CRM) - Concepts Studied

3.1 What is CRM and why is it needed?

Before CRM software, customer information was scattered: a phone number in one diary, an order in a register, a complaint in someone's memory. When that person left, the knowledge left too. CRM brings all of this into one shared record so that anyone in the business can see the full history of a customer - who they are, what they bought, what they asked and what was promised. The main benefits are more sales through timely follow-up, better service through quick access to history, saving of staff time through automation, better marketing through knowing the customer, and better decisions through reports. Well-known CRM products include Salesforce, HubSpot, Zoho CRM, Microsoft Dynamics and the free tiers of several tools; the student practised with a free CRM tool and with spreadsheets.

The three types of CRM were studied. Operational CRM supports the front-line work of sales, marketing and service. Analytical CRM studies customer data to find patterns, such as who is likely to leave. Collaborative CRM shares customer information between departments and with partners so that the customer gets a consistent experience.

3.2 The customer lifecycle

A customer does not arrive as a customer; a person becomes one in stages. A lead is a person or business that has shown some interest. A qualified lead is a lead who has the need, the budget and the authority to buy. An opportunity (or deal) is a qualified lead to whom an offer is being made. A customer is someone who has bought, and a loyal customer is one who buys again and recommends the business to others. A CRM tool tracks this journey and makes it visible, and the aim of the business is to move as many people as possible along it and to keep them from leaving.

Figure 1: The customer lifecycle

3.3 Lead management

Lead management begins with capture: leads come from sources such as the website form, walk-ins, phone calls, social media, referrals, campaigns and events. Each lead record stores the name, contact details, source, interest and the date. The next step is qualification, in which questions are asked about the need, budget, authority and time of purchase. Lead scoring gives points for each helpful sign, for example 20 points for a visit to the pricing page, 15 points for attending a demo, 10 points for opening an email and 25 points for a stated budget, and the total decides priority. Leads above a threshold are assigned to a sales person by a rule, such as area or round robin, and each must be followed up within a fixed time.

Lead	Source	Interest	Budget stated	Demo attended	Score	Priority
Lead 1	Website form	Class 10 maths	Yes (25)	Yes (15)	40	High
Lead 2	Referral	Class 12 science	Yes (25)	No	25	Medium
Lead 3	Social media	Spoken English	No	No	10	Low
Lead 4	Walk-in	Class 9 all subjects	Yes (25)	Yes (15)	40	High

A scoring rule of this kind was written in the practice tool: a score of 35 or more was High (call within one hour), 20 to 34 was Medium (call the same day) and below 20 was Low (send an email and follow up in a week).

3.4 Contacts, accounts and the sales pipeline

A contact is a person; an account is the organisation or family to which the person belongs. A good CRM links several contacts to one account and keeps a timeline of calls, emails, meetings and notes for each. A deal is an opportunity with an expected value and closing date. The sales pipeline arranges deals in stages - for example New, Qualified, Proposal sent, Negotiation, Won and Lost - and shows at a glance how much business is at each stage. The forecast is calculated by multiplying the value of each deal by the probability of the stage, and adding them up.

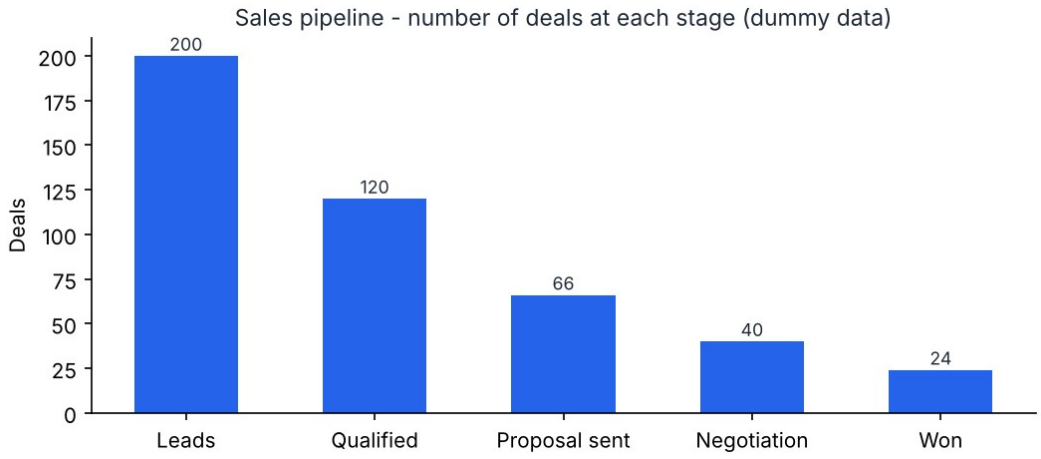

Figure 2: Sales pipeline - number of deals at each stage

From the dummy data, 200 leads gave 120 qualified leads (60%), 66 proposals (55% of qualified), 40 negotiations and 24 admissions won. The overall conversion rate was 24 / 200 = 12%. The pipeline immediately shows where deals are lost: the biggest drop is between lead and qualified lead, which suggests that the first call needs to be better prepared.

3.5 Customer support and ticketing

After a sale, the customer's experience depends on service. A ticketing system turns every complaint, question or request into a ticket with a number, a category, a priority, an owner and a status. The flow is: the ticket is raised (by phone, email or web form), assigned to an agent, worked on, resolved and closed after the customer confirms. Each priority has a service level agreement (SLA), for example a first response within two hours for urgent tickets and within one day for normal tickets. Measures such as the average first-response time, the average resolution time, the percentage of tickets solved within the SLA and the customer satisfaction score (CSAT) show how good the service is.

Figure 3: Life of a support ticket

3.6 Email campaigns and marketing automation

Email is still one of the cheapest ways to keep in touch with customers. A campaign has a goal, an audience (a segment), a message and a measure of success. Templates with merge fields such as {first_name} make each email personal. Automation sets up workflows that run by themselves: a welcome email when a new lead is created, a reminder if a form is left incomplete, a follow-up after three days of silence, a birthday offer and a re-engagement email to customers who have not bought for 90 days. The measures studied were the open rate

(emails opened as a percentage of emails delivered), the click rate, the conversion rate and the unsubscribe rate. Good practice includes a clear subject line, one main message per email, a visible unsubscribe link and consent from the person before sending.

3.7 Customer segmentation

Customers are not all the same, so treating them alike wastes effort. Segmentation divides customers into groups with similar behaviour, value or characteristics - by demographics (age, place), by behaviour (how often and how much they buy) and by value. One simple and popular method is RFM analysis: Recency (how recently the customer bought), Frequency (how often) and Monetary value (how much). Each is scored from 1 to 5 and the scores are combined to find groups such as Champions, Loyal customers, Potential loyalists, At-risk customers and Lost customers. A different action suits each group: reward the champions, upgrade the loyal, encourage the potential, win back the at-risk and learn why the lost customers left.

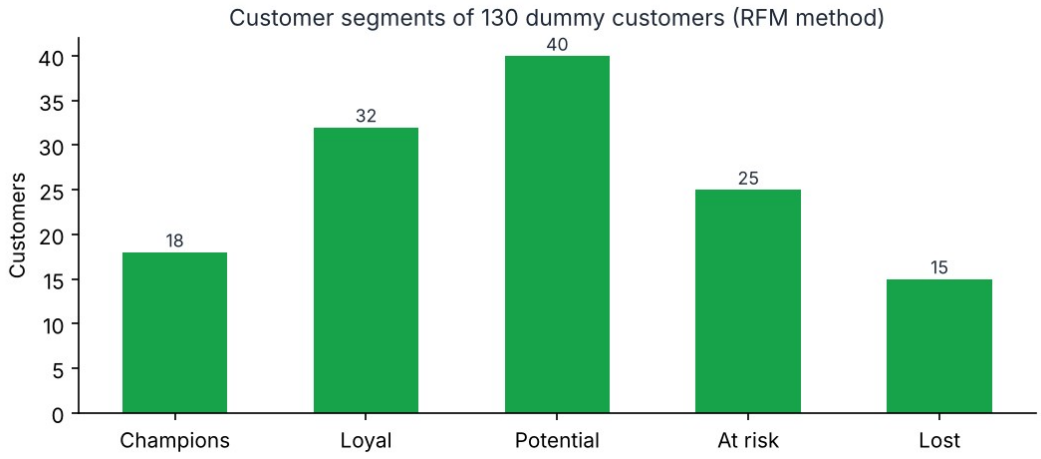

Figure 4: Customer segments of 130 dummy customers

3.8 Reports, dashboards and customer measures

The CRM database allows reports on sales (by person, source, product and month), pipeline (by stage and age), service (tickets by category and time to resolve) and marketing (campaign results). A dashboard puts the main numbers on one screen. Three customer measures were calculated by hand to understand them. The conversion rate is deals won divided by leads. Customer lifetime value (CLV) is a rough estimate of the money a customer brings over the whole relationship: average yearly spend x gross margin x expected years. The churn rate is the percentage of customers lost in a period.

Measure	Formula	Dummy figures	Result
Conversion rate	Deals won / leads x 100	24 / 200	12%
Customer lifetime value	Yearly spend x margin x years	Rs. 18,000 x 40% x 3 years	Rs. 21,600
Churn rate	Customers lost / customers at start x 100	15 / 130	11.5%
Retention rate	100 - churn rate	100 - 11.5	88.5%
Cost to acquire a customer	Marketing and sales cost / new customers	Rs. 48,000 / 24	Rs. 2,000

3.9 Customer retention strategies

Winning a new customer usually costs several times more than keeping an existing one, so retention is a priority. The strategies studied were: loyalty programmes that give points or discounts for repeat purchases; regular feedback surveys, such as the Net Promoter Score question 'How likely are you to recommend us?'; prompt and fair handling of complaints, because a well-handled complaint can increase loyalty; personal

communication on birthdays and anniversaries; re-engagement campaigns for customers who have gone quiet; and referral rewards that turn happy customers into new leads. The student noted that retention depends on the whole experience and that the CRM data helps to identify customers at risk before they leave, for example those whose purchases or visits have fallen.

3.10 Data quality, privacy and ethics in CRM

A CRM database holds personal data, and its value depends on the quality of that data. Duplicate contacts, old phone numbers and missing fields waste effort, so records should be checked regularly and duplicates merged. In India, personal data must be handled according to the Digital Personal Data Protection Act, 2023, which requires clear consent, use only for the stated purpose and reasonable security. Customers must be able to say no to messages and to ask for their data to be corrected. Messages must follow the telecom and email rules on unsolicited communication.

3.11 Choosing and introducing a CRM tool in a small business

A small business does not need the biggest tool; it needs one that its staff will actually use. The questions to ask before choosing are: What are the three or four problems to be solved? How many users will there be? Can the tool be used on a mobile phone, where most small-business staff work? Does it connect with WhatsApp, email, telephony and the accounting software? What is the total yearly cost, including training? Can the data be exported if the business later changes the tool? The student compared the common options in a simple table.

Option	Best suited for	Advantage	Limitation
Spreadsheet (Excel or Sheets)	A very small business starting out	No cost, familiar, quick to set up	No reminders or automation; easy to damage the data
Free or low-cost cloud CRM	Small shops, coaching centres, freelancers	Pipelines, reminders, mobile app, email tools	Limits on users, records and features
Full CRM suite	Medium and large companies	Automation, analytics, integration, support	Cost, training time and complexity
Industry-specific software	Schools, clinics, real estate	Built-in forms and processes for the sector	Less flexible outside the sector

Introducing the tool is a change in habits, so it should be done in steps: start with leads and follow-ups only, show the staff the benefit in their own work, set a rule that a lead not in the CRM does not exist, review the data every week and add more features after the habit is formed. The commonest reasons for failure are that staff see the entry of data as extra work, that the owner does not use the reports and that the data is allowed to become old and untrustworthy.

4. Week-wise Plan and Execution

Week	Days	Activities
Week 1	Days 1-6	Orientation and foundations: company induction, introduction to CRM and its types, lead management and contact and account management, each with a study session and a practice task.
Week 2	Days 7-12	Selling and servicing: sales pipeline and forecasting, customer support ticketing and email campaign automation.
Week 3	Days 13-18	Customer insight: customer segmentation, CRM reports and dashboards, and customer retention strategies.
Week 4	Days 19-24	CRM tool practice and the Customer Lifecycle project; case study exercise and mock practical exercise.

Week	Days	Activities
Week 5	Days 25-28	Project closure: supervisor review and feedback, internship report drafting, presentation preparation and final review.

5. Week-wise Narrative

Week 1: The first week was devoted to orientation and foundations. After company induction, the student studied what CRM is, its benefits and types, and the customer lifecycle, and then practised capturing and scoring leads and creating contact and account records.

Week 2: In the second week the student studied the sales pipeline, tracked dummy deals from stage to stage and prepared a simple forecast. The week then moved to customer support ticketing, with tickets created, prioritised and closed, and to the design of email templates and automation workflows.

Week 3: The third week focused on customer segmentation with the RFM method, on CRM reports and dashboards, and on retention strategies, including loyalty programmes and feedback surveys.

Week 4: In the fourth week the student worked end to end in a CRM tool, following a customer from lead to repeat purchase, and completed the project, a case study exercise and a mock practical exercise.

Week 5: The last week was devoted to project closure: supervisor review and feedback, drafting of the internship report, preparation of a presentation and final review before submission.

6. Topic-wise Learning in Detail

6.1 CRM Concepts and Types

Concept: The meaning of CRM and its operational, analytical and collaborative types. **Practice carried out:** Writing a one-page note on CRM for a small shop and listing which type each of its activities belongs to.

6.2 Lead Management

Concept: Capturing, qualifying, scoring and assigning leads. **Practice carried out:** Creating twenty lead records, writing a scoring rule and assigning priorities (section 3.3).

6.3 Contact and Account Management

Concept: Contact and account records, history and relationships. **Practice carried out:** Creating contacts linked to accounts and entering a timeline of calls and notes for five of them.

6.4 Sales Pipeline

Concept: Pipeline stages, deal tracking and forecasting. **Practice carried out:** Moving dummy deals through six stages and calculating a weighted forecast.

6.5 Customer Support Ticketing

Concept: Creating, assigning, prioritising and closing tickets. **Practice carried out:** Creating ten tickets of different categories, setting priorities and SLA times, and calculating the average resolution time.

6.6 Email Campaign Automation

Concept: Email templates, segments, scheduling and automation workflows. **Practice carried out:** Writing a welcome email, a follow-up and a re-engagement email with merge fields, and drawing the workflow.

6.7 Customer Segmentation

Concept: Grouping customers by behaviour, value and demographics. **Practice carried out:** Scoring 130 dummy customers on recency, frequency and monetary value and forming five segments.

6.8 CRM Reports and Dashboards

Concept: Sales, service and marketing reports and dashboards. **Practice carried out:** Building a report with leads by source, win rate by person and tickets by category in MS Excel.

6.9 Customer Retention Strategies

Concept: Loyalty programmes, feedback and re-engagement. **Practice carried out:** Designing a loyalty scheme and a feedback survey with the Net Promoter Score question.

6.10 CRM Tool Practice

Concept: Working through a CRM tool end to end with sample data. **Practice carried out:** Following one customer from lead to repeat purchase and recording every step in the tool.

7. Good Practice, Privacy and Ethics - Points Studied

A CRM database contains the personal details of real people, so honesty and care are part of the work. The points studied are summarised below.

- **Consent:** collect and use a customer's data only with permission and for the stated purpose.
- **Data quality:** record every interaction on the same day; avoid duplicates and keep fields complete.
- **Honest communication:** do not promise what cannot be delivered; give correct prices and terms.
- **Respect for preferences:** every message must allow the customer to opt out, and the choice must be respected.

- **Security and access:** only authorised staff may view or export customer data, and each person has a separate login.
- **Fair and timely service:** respond to every ticket within the agreed time and treat all customers equally.
- **Legal compliance:** follow the Digital Personal Data Protection Act, 2023, the Consumer Protection Act, 2019 and the rules on unsolicited commercial communication.

8. Process Flows Studied

8.1 From lead to customer

- Capture the lead from a source and record all details.
- Qualify the lead by asking about need, budget, authority and time.
- Score and assign the lead to a sales person.
- Follow up, send an offer and record each contact.
- Win or lose the deal, record the reason, and for won deals start the onboarding.

8.2 Handling a complaint

- Listen without interrupting and record the complaint as a ticket.
- Thank the customer and say what will be done and by when.
- Find the cause and fix the problem within the service level.
- Inform the customer and ask whether the problem is solved.
- Close the ticket, record the cause and use it to improve the process.

9. Worked Examples with Sample (Dummy) Data

Worked example 1 - a pipeline forecast. For the coaching centre, five dummy deals were at different stages. Each stage has a probability of closing: Qualified 20%, Proposal sent 40%, Negotiation 70%. The weighted forecast is the sum of value x probability.

Deal	Course fee (Rs.)	Stage	Probability	Weighted value (Rs.)
Deal A	24,000	Negotiation	70%	16,800
Deal B	18,000	Proposal sent	40%	7,200
Deal C	30,000	Qualified	20%	6,000
Deal D	12,000	Negotiation	70%	8,400
Deal E	20,000	Proposal sent	40%	8,000
Total	1,04,000			46,400

The total value of the open deals is Rs. 1,04,000, but the realistic forecast is Rs. 46,400, which is a more honest figure for planning the next month's income. Sales staff should concentrate on the deals in the negotiation stage because they have the highest probability.

Worked example 2 - a customer lifecycle in the CRM tool. One dummy customer, Priya Sharma, was followed through the CRM. She filled the website form (lead, score 40, High); the counsellor called within one hour and recorded the call; she attended a demo class (opportunity); a proposal for a Class 10 course of Rs. 24,000 was sent; after a discount discussion she enrolled (customer, deal won); a ticket was raised when the study material was delayed and was closed within the SLA of 24 hours; she received a feedback survey with a high score; and after six months she was sent a re-enrolment offer for the next class. Each step is a record in the CRM, and the account shows the complete history in one screen.

Worked example 3 - an email campaign result. A re-engagement email was sent to 130 dummy customers. 104 emails were delivered, 41 were opened and 12 customers clicked the offer link; 5 re-enrolled. The open rate is 41 / 104 = 39.4%, the click rate is 12 / 104 = 11.5% and the conversion is 5 / 104 = 4.8%. The campaign cost Rs. 1,000 and brought Rs. 60,000 of enrolments, so it was highly profitable. The result also showed that the subject line was effective but that the offer page needed to be simpler, because only 5 of the 12 who clicked finally enrolled.

10. Project: CRM Setup & Customer Lifecycle Project

Problem statement. Gyan Deep Classes, a fictitious coaching centre in Gaya with 130 students and four teachers, receives enquiries through phone calls, walk-ins, social media and referrals. The enquiries are written in a notebook, call-backs are often forgotten, fee reminders are given by hand, and the owner cannot say how many enquiries become admissions. The aim of the project was to design a CRM set-up for the centre and to practise the full customer lifecycle in it.

10.1 CRM design

Element	Design
Lead sources	Website form, phone, walk-in, social media, referral
Lead fields	Name, mobile, class, subject, source, date, score, owner
Pipeline stages	New, Qualified, Demo, Proposal, Negotiation, Won, Lost (with reason)
Customer fields	Student name, parent, class, batch, fee, mobile, preferred time
Ticket categories	Fees, study material, timetable, teacher feedback, other
Automation	Welcome message, demo reminder, follow-up after 3 days, fee reminder, re-enrolment offer
Reports	Leads by source, conversion by counsellor, tickets by category, fee dues, retention

10.2 Lifecycle practice and findings

Two hundred dummy leads were created in a spreadsheet that imitates the CRM and moved through the pipeline. The result was 120 qualified leads, 66 proposals, 40 negotiations and 24 admissions, an overall conversion rate of 12%. Referral leads converted at 25%, website leads at 14% and social media leads at 6%, so the centre should invest more in referral rewards and improve its follow-up of social media leads. The average time to the first call was 6 hours; the target was set at 1 hour for High-priority leads. Of the 130 dummy customers, the RFM method found 18 champions, 32 loyal, 40 potential, 25 at-risk and 15 lost customers (Figure 4).

10.3 Retention plan

- Reward champions with a referral bonus and priority batches.
- Give loyal customers a small discount for early re-enrolment.
- Send a personal message and a free doubt-solving class to potential loyalists.
- Call at-risk students and parents within a week, find the reason and offer a solution.
- For lost customers, run a short survey on why they left and use the answers to improve.
- Send a monthly feedback form with the Net Promoter Score question and review the result.

10.4 Expected benefits and limitations

The CRM would ensure that no enquiry is forgotten, would shorten the time to the first call, would show which source gives the best admissions, and would help the centre to keep students for the next class. The main limitations noted were that the results depend on regular data entry by the staff, that the figures used were dummy and that a real set-up would need training, a data-protection notice for parents and regular review.

10.5 Implementation plan

Stage	Activity	Duration	Owner
1. Preparation	List processes, define fields, stages and ticket categories	1 week	Owner and counsellor

Stage	Activity	Duration	Owner
2. Set-up	Create the CRM with fields, pipeline and templates	1 week	Intern and counsellor
3. Data	Clean and import the notebook records of students and enquiries	1 week	Office staff
4. Training	Show the staff how to add leads, calls and tickets	3 days	Counsellor
5. Pilot	Use the CRM for new enquiries only and review results	1 month	All staff
6. Full use	Move all processes, start automation and monthly reports	Continuing	Owner

10.6 Measures to be tracked

Measure	Meaning	Target
First response time	Time from enquiry to the first call	Within 1 hour for High leads
Lead-to-admission conversion	Admissions as a percentage of leads	From 12% to 16% in six months
Ticket resolution within SLA	Share of tickets closed in 24 hours	90%
Retention rate	Students who re-enrol for the next class	From 88.5% to 92%
Referral share	Admissions that came through referrals	30% of all admissions

11. Case Study Exercise: A Retail Shop Losing Repeat Customers

A fictitious ready-made garments shop in Aurangabad (Bihar) has a good location and a loyal base of walk-in customers, but sales have been falling for a year. The owner notes that customers come at festival time, buy once and are not seen again until the next festival. Bills are written by hand, and there is no record of who bought what. Two nearby shops have started offering home delivery and WhatsApp offers. The student was asked to suggest how CRM could help.

Analysis. The shop has no information about its customers, so it cannot contact them, reward them or know why they leave. It depends on walk-in traffic and has no method of repeat selling. The competitor shops are using the customer's phone number as a tool.

Proposed solution. Start collecting the name, mobile number and birthday of every customer at billing, with permission, in a simple CRM or even a spreadsheet; record purchase amount and date; segment customers by recency and value; send a thank-you message after purchase, a birthday offer and a pre-festival preview to loyal customers; introduce a points scheme; and ask for feedback by a short message. Complaints and exchanges should be recorded as tickets and closed within three days.

Expected benefit and cautions. Repeat purchases would grow, the shop could find customers who have gone quiet and offers could be targeted instead of given to everyone. The cautions noted were to ask permission before sending messages, to avoid too many messages, to protect the data and to train the staff to enter data at the counter without slowing down billing.

12. Mock Practical Exercise: Managing a Customer Journey in the CRM Tool

A mock practical exercise was conducted at the end of the learning phase to check that the student could manage a customer journey in a CRM tool independently. The task was to handle ten dummy leads of a fictitious computer training institute from capture to a decision. The steps followed were:

1. Lead capture: ten leads were entered with source, interest and contact details, and duplicates were checked.
2. Scoring and assignment: a scoring rule was applied and leads were assigned to two counsellors.
3. Follow-up: calls and notes were recorded and next actions with dates were set for each lead.
4. Pipeline: deals were moved through the stages and the weighted forecast was calculated.
5. Ticket: a complaint from one customer was recorded as a ticket, prioritised and closed within the SLA.
6. Email: a welcome email and a follow-up email were written with merge fields and scheduled.
7. Report: a report of leads by source, conversion rate and open tickets was prepared.
8. Presentation: the journey and the report were explained to the supervisor in about five minutes.

13. Sample Checklists Prepared

Lead follow-up checklist

- Lead recorded with source and complete contact details on the same day.
- First contact within the target time and the call summary recorded.
- Next action and date set for every open lead.
- Lost deals marked with a reason.

Customer data checklist

- No duplicate contacts; phone and email formats correct.
- Consent for messages recorded; opt-outs respected.
- Only authorised users can export data.

- Records reviewed and cleaned every month.

14. Tools and Resources

The following tools and resources were used during the internship: a free CRM tool for practice, MS Excel for lead lists, pipeline reports and RFM scoring, MS Word and MS PowerPoint for notes and presentation, email template samples, learning material and case studies given by the agency, reference notes on data protection and customer-communication rules, and regular mentor feedback.

15. Programme at a Glance

The programme was in the domain of Customer Relationship Management (CRM) with RKNEXORA PRIVATE LIMITED as the agency. It required a minimum of 120 hours over 28 learning days, organised in three phases: Orientation (Days 1-2), Learning and Practice (Days 3-22) and Project and Review (Days 23-28). Attendance was recorded in the Internship Attendance Log, signed by the supervisor (see Attendance Sheet).

The approximate distribution of the effort across the topics is shown below.

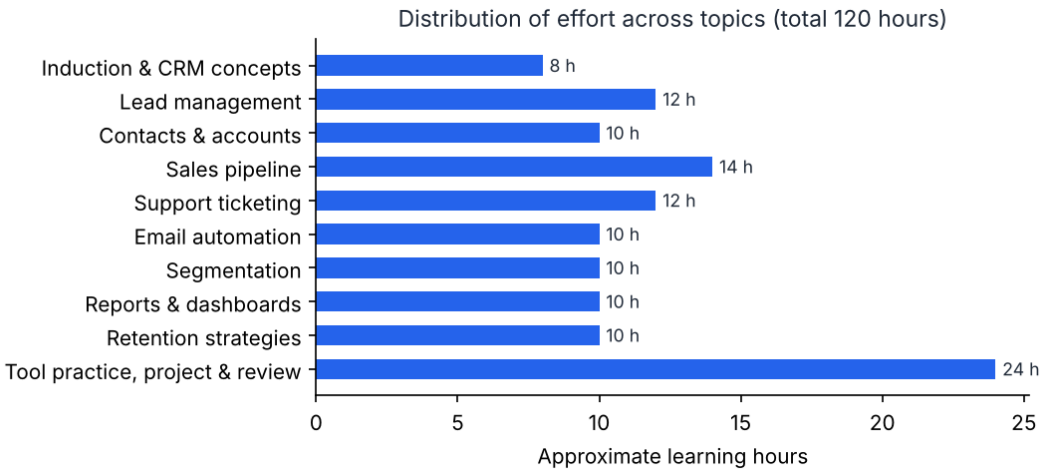

Figure 5: Distribution of learning effort across topics (120 hours)

LEARNING OUTCOME

a. Knowledge Acquired

1. The meaning, benefits and types of CRM, and examples of CRM tools.
2. The customer lifecycle from lead to loyal customer.
3. Lead capture, qualification, scoring and assignment.
4. Contact and account records, activity timelines and relationship tracking.
5. The sales pipeline, deal stages, win rate and weighted forecasting.
6. Support tickets, priorities, service level agreements and service measures.
7. Email templates, merge fields, automation workflows and campaign measures.
8. Customer segmentation using RFM analysis.
9. CRM reports, dashboards, conversion rate, customer lifetime value and churn.
10. Retention strategies and the legal and ethical handling of customer data.

Glossary of Terms Learned

- **CRM** - Customer Relationship Management.
- **Lead** - A person or business showing interest in the product.
- **Qualified lead** - A lead with a real need, budget and authority.
- **Opportunity / Deal** - A qualified lead with an offer and expected value.
- **Pipeline** - The stages through which deals move.
- **Conversion rate** - Percentage of leads that become customers.
- **Lead scoring** - Giving points to leads to find the best ones.
- **Account / Contact** - An organisation or family / a person in it.
- **Ticket** - A record of a customer complaint or request.
- **SLA** - Service Level Agreement, the promised response or resolution time.
- **CSAT / NPS** - Customer satisfaction score / Net Promoter Score.
- **Segmentation** - Dividing customers into groups with similar needs.
- **RFM** - Recency, Frequency, Monetary value.
- **CLV** - Customer Lifetime Value.
- **Churn** - The share of customers lost in a period.
- **Retention** - Keeping customers over time.
- **Workflow / Automation** - Steps that run automatically after a trigger.
- **Open rate / Click rate** - Share of emails opened / share of emails with a link clicked.
- **Opt-out** - A customer's choice to stop receiving messages.

b. Skills Learned

Technical skills. Creating and cleaning lead, contact and account records; scoring and assigning leads; tracking deals in a pipeline and calculating a weighted forecast; creating and closing tickets with priorities and SLAs; writing email templates and automation workflows; segmenting customers with the RFM method; calculating conversion rate, CLV, churn and campaign measures; and preparing CRM reports in MS Excel.

Professional skills. Customer orientation and empathy; clear written and spoken communication; follow-up discipline; analytical thinking; attention to data quality; teamwork between sales and service; time management; and presenting findings in simple words.

These skills were developed through repeated practice and daily documentation. Handling dummy customers from lead to repeat purchase built empathy and follow-up discipline, writing templates built communication skill, calculating measures built analytical accuracy, and explaining the project to the supervisor built confidence.

c. Observed Attitude and Gained Values

1. **Customer respect:** every customer was treated as a person with a need, and complaints were seen as chances to improve.
2. **Honesty:** offers and promises must be truthful and achievable.
3. **Privacy and responsibility:** customer data was handled with consent and care, and only dummy data was used.
4. **Consistency:** regular follow-up and recording are the habits on which good CRM stands.
5. **Discipline and punctuality:** regular reporting at fixed timings and daily attendance records.

d. Challenges Faced

Understanding the difference between a lead, an opportunity and a customer was handled by drawing the lifecycle and marking the stage of each practice record.

Writing a fair lead-scoring rule was difficult at first; it was handled by testing the rule on twenty dummy leads and adjusting the points.

Understanding RFM scoring was handled by scoring a small table by hand before using the spreadsheet formulas.

Writing short, clear and polite emails was handled by using templates, reading examples and asking for the supervisor's feedback.

Keeping the records complete and up to date was handled by entering each interaction at once and checking the data every day.

Managing time between practice, documentation and report writing was handled by dividing work week by week and using review days for corrections.

e. Career Pathways

The knowledge gained supports careers such as CRM Executive, Customer Success Executive, Sales Executive and Business Development Executive, Customer Support and Service Executive, Marketing Automation Executive, CRM Administrator (junior) and Junior Business Analyst. Opportunities exist in banks, insurance, telecom, education, real estate, e-commerce, IT services and start-ups, and any business with repeat customers. Related higher-study options include MBA or PGDM in marketing or sales, BBA and BMS, and certificate courses in CRM tools, digital marketing and data analytics. A good next step is to learn one CRM product in depth, learn Excel and basic SQL for reports and learn the basics of data protection law.

CONCLUSION

The internship in Customer Relationship Management (CRM) was a valuable learning experience that integrated academic knowledge with practical activity. The programme achieved its objectives through structured learning, guided practice, assignments, supervisor review and documentation.

The student gained a clear understanding of how a business attracts, serves and keeps its customers - through lead management, contact and account records, the sales pipeline, ticketing, email automation, segmentation, reports and retention - and acquired practical familiarity with CRM tools and measures such as conversion rate, customer lifetime value and churn. The experience has strengthened the student's employability and provides a foundation for further study and work in sales, marketing and customer service.

Reflection

Looking back, the most useful lesson of the internship was that a business relationship is built from many small, recorded interactions. A call made on time, a complaint closed within the promised hours and a message sent on a birthday cost little, but together they decide whether a customer comes back. The CRM tool does not create good service; it makes good service possible by remembering what people forget. Working with numbers such as conversion rate and churn also showed that customer relationships can be measured and improved.

Objectives and Achievement

The objective of understanding CRM and the customer lifecycle was achieved through the lifecycle figure and the Priya Sharma journey. The objective of lead, contact and pipeline management was achieved through the lead scores, the pipeline chart and the weighted forecast. The objective of ticketing, email and segmentation was achieved through the ticket flow, the campaign result and the RFM analysis. The objective of reports and retention was achieved through the measures table and the retention plan, and the project objective was achieved through the Gyan Deep Classes CRM design.

Future Scope

The knowledge gained can support further study of marketing, sales and analytics and careers in customer success, sales operations and CRM administration. With the growth of online selling, digital payments and customer expectations in Bihar and across India, businesses of all sizes need people who can organise customer data, respond quickly and build lasting relationships.

Suggestions for Improvement of the Programme

1. Provide access to a full-featured CRM tool with sample data for each student.
2. Include a short session on data protection and customer communication rules.
3. Add a role-play session on handling customer complaints and sales calls.
4. Continue regular mentor feedback and progress reviews.
5. Encourage students to maintain detailed daily documentation.
