ACKNOWLEDGEMENT

I express my sincere gratitude to RK NEXORA, RKNEXORA PRIVATE LIMITED, _____ (College Name), my faculty mentors and the internship supervisor, _____, for their guidance and support. The structured activities, learning resources and regular feedback helped me complete this internship in Entrepreneurship Development successfully.

I am thankful to the Head of the Department and the college mentor for their encouragement and for guiding me in preparing this report. I am also grateful to the management of RKNEXORA PRIVATE LIMITED for providing a professional learning environment and the opportunity to learn and apply my knowledge in a practical setting. The concept sessions, hands-on tasks with sample business plan templates and dummy figures, and the supervisor's patient and detailed feedback helped me understand how business ideas are spotted, tested, planned, financed, registered, marketed and pitched behind the scenes.

Finally, I thank my family and peers for their constant encouragement throughout the programme.

PREFACE

Internships are an important part of the undergraduate programme, as they allow students to see how classroom learning is applied in real organisations. The Four-Year Undergraduate Programme (FYUGP), introduced in line with the National Education Policy 2020, gives special importance to experiential learning, skill development and employability. This report has been prepared as part of the internship requirement of Magadh University and the Higher Education guidelines applicable in Bihar.

The report describes the internship undertaken in Entrepreneurship Development at RKNEXORA PRIVATE LIMITED, the plan followed, the work carried out, and the learning gained. Whether it is a tiffin service for students in Gaya, a mobile-repair shop in a block town, a small online store or a farm-based business, every new venture begins as an idea that has to be tested, planned and financed before it can become a living business. Many ventures fail not because the owner does not work hard but because the idea was never checked against real customers, the money was not planned, the legal steps were skipped or the risks were ignored. Entrepreneurship Development is the set of knowledge, attitudes and skills that prevents this: understanding the entrepreneurial mindset, spotting opportunities, checking the market, writing a business plan, planning finance, using government support, setting up the business legally, marketing it with a small budget, assessing risk and pitching the idea to others. This internship offered a first-hand introduction to how these steps work together.

The report has been arranged in the order suggested by the University, beginning with the cover page and acknowledgement and ending with the conclusion and attendance sheet. It is hoped that the report gives a clear and honest account of the internship experience. All examples in it use dummy data and fictitious organisations; no real client, team or financial information was handled and no confidential document was used.

EXECUTIVE SUMMARY

This report documents the internship completed in Entrepreneurship Development at RKNEXORA PRIVATE LIMITED (RK NEXORA - 'Campus to Career'). The programme required a minimum of 120 hours, completed over about four to five weeks (28 working days) with daily sessions of four to five hours, and was supported by an attendance log, supervisor guidance and review.

Background. Entrepreneurship means identifying an opportunity, gathering the resources to act on it and bearing the risk of building a new venture that creates value for customers and income for its owner. Its great strength is that an idea can be tested on paper before money is spent: how many customers are likely, what will it cost, when will the venture break even, which licences are needed and what can go wrong. A good entrepreneur therefore combines initiative and creativity with planning, arithmetic, communication and ethics. For a student from any discipline, the internship shows how a business idea moves from a thought to a plan that a customer, a bank or a mentor can understand.

Objectives. The internship aimed to (i) build a structured understanding of the entrepreneurial mindset and process, (ii) learn to identify and screen opportunities and to test them through a market feasibility study, (iii) learn to write a business plan and to plan startup finance, (iv) learn about government schemes for MSMEs and the legal setup of a business, (v) learn marketing for new ventures, risk assessment and business pitching, (vi) complete a business planning project with charts and diagrams, and (vii) develop communication, documentation and professional discipline.

Work carried out. The student first studied the fundamentals of Entrepreneurship Development, then worked through the entrepreneurial mindset, opportunity identification, business plan writing, market feasibility study, financial planning for startups, government schemes (MSME), legal setup of a business, marketing for new ventures, risk assessment and business pitch practice. Each topic had a concept session followed by a hands-on task using free tools, planning templates and dummy data. The later part of the programme was devoted to a case study, a mock practical exercise, supervisor review and preparation of this report.

Project. The work was tied together in a project titled New Venture Business Plan, in which an opportunity evaluation, a business model canvas, a market feasibility study, a financial plan with break-even analysis, a funding and legal plan, a launch marketing plan, a risk register and a business pitch were prepared for a fictitious venture.

Method. A blended method was followed - learn, practise, document and review - supported by a daily attendance log with day-wise remarks and regular feedback from the supervisor.

Learning gained. The student gained a clear understanding of how a business idea is screened, tested, planned, financed, registered and launched, practical familiarity with scoring matrices, business model canvases, demand estimates, cost and break-even calculations, scheme eligibility charts, licence checklists, launch marketing budgets, risk registers and pitch outlines, awareness of professional ethics and of contract, consumer and data protection rules, and improved communication, organisation and professional discipline.

Key observations. Ventures succeed when the idea is tested with real customers before money is spent; the break-even point, not hope, decides whether a plan is viable; cash runs out before profit appears, so working capital must be planned; legal registrations and support schemes should be checked at the start; risks should be listed and owned before they become problems; and honest, simple communication builds the trust that a pitch depends on.

Conclusion. The internship met its objectives and contributed to the student's academic understanding, employability and confidence. The report follows the University's suggestive format: cover page, acknowledgement, certificate, contents, preface, executive summary, about the agency, plan and execution, learning outcome, conclusion and attendance sheet.

ABOUT THE AGENCY

RK NEXORA, a unit of RKNEXORA PRIVATE LIMITED, provides structured internship and skill-development programmes under the theme 'Campus to Career'. The organization focuses on academic-industry alignment, practical exposure, assessment, documentation and employability-oriented learning.

Particulars	Details
Name of Agency	RKNEXORA PRIVATE LIMITED
Programme / Unit	RK NEXORA - Campus to Career
Registered Office	C/O Mukesh Kumar, Khiri, PS Atri, Jethiyan, Atri, Gaya - 805236, Bihar, India
CIN	U85499BR2026PTC086757
Email	rknexorapvtltd@gmail.com
Website	www.rknexora.org
Internship Topic	Entrepreneurship Development

1. Vision

To support students in developing practical, professional and industry-relevant capabilities.

2. Mission

To deliver structured learning experiences that connect academic knowledge with workplace expectations.

3. Activities of the Agency

1. Structured internship programmes aligned with university and higher-education requirements.
2. Skill-development learning modules, practical activities and assignments.
3. Attendance tracking, supervision, assessment and documentation.
4. Employability-oriented guidance connecting campus learning to career readiness.

4. Programme Structure

The internship programme is organised around a fixed number of learning hours, completed over a defined period. Each intern is registered on the internship portal with a unique registration number, is assigned a supervisor, follows a day-wise plan and maintains an attendance log. Learning is organised into three phases: Orientation (Days 1-2), Learning and Practice (Days 3-22, ten sub-topics of two days each: one concept day and one hands-on day) and Project and Review (Days 23-28), followed by a concluding review.

5. Role of the Supervisor

The internship supervisor assigned by the agency guided the student through the programme, explained concepts, assigned practice tasks, reviewed the daily log and gave feedback. The supervisor also verified attendance and reviewed the student's work at the end of the programme.

PLAN AND EXECUTION

1. Objectives

The internship was planned around the following objectives, each linked to a part of the programme:

1. Understand the entrepreneurial mindset and the entrepreneurial process - traits, risk taking and self-motivation (Week 1).
2. Learn opportunity identification - spotting needs, trends and gaps in the market and screening ideas (Week 1).
3. Learn business plan writing - the sections of a plan and the business model canvas (Week 2).
4. Learn the market feasibility study - demand, competition and viability of an idea (Week 2).
5. Learn financial planning for startups - cost, working capital, revenue and break-even (Week 2).
6. Learn government schemes (MSME), the legal setup of a business and marketing for new ventures (Week 3).
7. Learn risk assessment and business pitching, and complete the project (Week 4).
8. Develop professional discipline - communication, honesty, documentation and report writing (throughout).

2. Methodology

The programme followed a blended method made up of four connected steps, repeated for each topic:

Learn. Each topic began with a concept session in which the supervisor explained the purpose of the topic, its main terms and how it connects with the other parts of Entrepreneurship Development. Notes were prepared in the student's own words.

Practise. The concepts were then applied in guided hands-on tasks - completing a self-assessment of entrepreneurial traits, scoring business ideas on a weighted matrix, filling a business model canvas, tabulating a customer survey, preparing a project cost and means of finance table, calculating break-even in MS Excel, checking scheme eligibility, preparing a licence checklist, planning a launch marketing budget, keeping a risk register and rehearsing a three-minute pitch. Only fictitious ventures, sample documents and dummy figures were used, so that no real personal or confidential information was handled.

Document. Every day's work was recorded in the internship attendance log with a short remark, and sheets, drafts and reports were saved so that the work could be reviewed.

Review. The supervisor reviewed the work, pointed out errors and suggested improvements. Review days, a case study and a mock practical exercise helped to consolidate the learning.

3. Understanding Entrepreneurship Development - Concepts Studied

3.1 Entrepreneurial mindset and the entrepreneurial process

An *entrepreneur* is a person who spots an opportunity, brings together money, people and materials, and takes the risk of starting a venture that creates value for customers. *Entrepreneurship* is the process, and the person may start a small shop, a service, a farm-based business or a technology startup. An entrepreneur differs from a manager, who runs an existing system, and from an *intrapreneur*, who shows the same initiative inside an existing organisation. Ventures may be micro and small businesses meant to give the owner a stable income, scalable startups built to grow fast, or social enterprises that put a social aim first.

Studies of successful entrepreneurs often point to a common set of traits: initiative, calculated risk taking, self-motivation, persistence, creativity, planning, leadership, adaptability and financial discipline. The psychologist David McClelland linked entrepreneurship with a strong need for achievement, and Carol Dweck's idea of a growth mindset - the belief that ability grows through effort and feedback - explains why successful founders treat failure as information. Risk taking does not mean gambling: a calculated risk is one whose size has been measured and whose loss can be survived. These traits can be developed through practice, which is why the programme began with a self-assessment and a personal goal plan.

The entrepreneurial process moves through stages: an idea and the mindset to act on it; screening the idea as an opportunity; testing it in a feasibility study; writing the business plan; mobilising money and completing legal registrations; launching; and growing or reviewing the venture (Figure 1). Ventures commonly fail because there is no real customer need, because cash runs out, because competition or costs were underestimated, or because the owner did not plan, record and review.

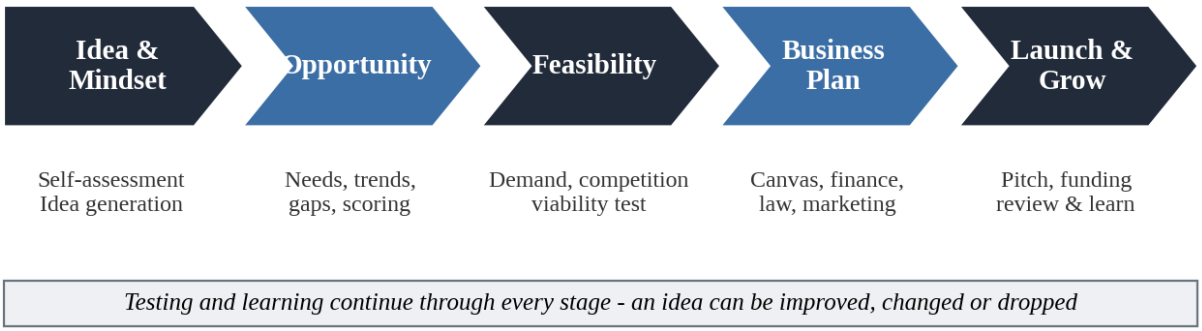

Figure 1: The entrepreneurial process

3.2 Opportunity identification

An *idea* becomes an *opportunity* only when it meets a real need at a price customers will pay and can be delivered at a profit. Opportunities come from unmet needs and daily problems, from trends (changes in technology, lifestyle, law or income), from gaps left by existing sellers, from local resources and skills, and from hobbies and experience. Useful methods are observation, short interviews with possible customers, surveys, brainstorming, the SCAMPER checklist (substitute, combine, adapt, modify, put to other use, eliminate, reverse), and listing the problems of a locality and asking who would pay to solve each.

Because every idea cannot be pursued, ideas are screened. In a *weighted scoring matrix* the entrepreneur chooses criteria such as demand, competition, investment needed, fit with own skills and ease of legal approval, gives each a weight that adds up to 100% and scores every idea from 1 to 5 on each criterion (the higher the score the better for the entrepreneur). The weighted score is the sum of weight x score. The best idea is then tested cheaply with a minimum viable product, for example a free trial or a pre-order, before large amounts are spent. Customer discovery interviews ask about the customer's present behaviour and problems and avoid leading questions such as 'Would you buy my idea?'.

3.3 Business plan writing

A *business plan* is a written description of what the venture will sell, to whom, how, with what resources and with what financial result. It guides the owner, helps to recruit partners and supports applications for a bank loan or a scheme such as PMEGP, where a Detailed Project Report is required. The usual sections are an executive summary, business description and objectives, products or services, market analysis, marketing plan, operations plan, organisation and management, financial plan, risks and their responses, an implementation timeline and appendices. Objectives should be SMART - specific, measurable, achievable, relevant and time-bound - for example 'to reach 75 customers a day by the end of month 3'.

The *business model canvas* of Alexander Osterwalder summarises a plan on one page in nine blocks: customer segments, value proposition, channels, customer relationships, revenue streams, key resources, key activities, key partners and cost structure. Good plans are short and specific, state every assumption beside the number it affects, keep figures consistent across sections and give evidence for claims, such as survey results or quotations.

3.4 Market feasibility study

A feasibility study asks whether an idea can work before the money is spent. It looks at market, technical, financial, legal and operational feasibility, and the market part is usually studied first. *Primary data* is collected by the entrepreneur through surveys, interviews and observation; *secondary data* comes from existing reports, government statistics and websites. The demand estimate follows a funnel: all possible customers in the target area, the share who are interested, and the share the venture can realistically serve. Larger-market terms are TAM (total market), SAM (the part that can be served) and SOM (the part that can be won).

Competition is studied by listing direct competitors (the same product) and indirect competitors (another way of meeting the same need) and comparing their price, quality, location, service and weaknesses. Price may be set by cost-plus (cost plus a margin), by competitors' prices or by the value the customer sees. A SWOT analysis (strengths, weaknesses, opportunities, threats) gives a summary, and a sensitivity check asks what happens if demand is 20% lower than planned. The study ends with a clear go, change or no-go decision.

3.5 Financial planning for startups

Project cost is the money needed before the venture earns: fixed capital (equipment, fittings, deposits, licences and launch expenses) plus *working capital* (money to run daily operations until sales are collected). Costs are either fixed, which do not change with sales in the short run (wages, rent), or variable, which rise with each unit (ingredients, packing). *Contribution* per unit is the selling price minus the variable cost per unit. The *break-even point* is where total revenue equals total cost: break-even units = fixed cost / contribution per unit. The *margin of safety* = (planned units - break-even units) / planned units, and profit = contribution x units sold - fixed cost.

The money is raised through *means of finance*: the owner's own savings (promoter's contribution), a bank loan, subsidies and grants, and, for fast-growing startups, angel or venture capital. A loan is repaid in equal monthly instalments (EMI) = $P \times r \times (1 + r)^n / ((1 + r)^n - 1)$, where P is the loan, r the monthly interest rate and n the number of months. Simple payback = project cost / yearly profit. Profit and cash are different: a venture can show profit on paper and still run out of cash because customers pay late or stock is bought in advance, so a monthly cash-flow statement is prepared along with the profit and loss account and balance sheet. A separate business bank account and a daily cash book are basic habits.

3.6 Government schemes (MSME)

The Micro, Small and Medium Enterprises Development Act, 2006 defines the MSME sector. With effect from 1 April 2025 an enterprise is a micro enterprise if its investment does not exceed Rs. 2.5 crore and its turnover does not exceed Rs. 10 crore, a small enterprise up to Rs. 25 crore and Rs. 100 crore, and a medium enterprise up to Rs. 125 crore and Rs. 500 crore. *Udyam Registration* is a free online registration (on the official Udyam portal) that gives a business its MSME identity and helps in getting priority-sector loans, collateral-free credit under the CGTMSE guarantee scheme, subsidies and protection against delayed payments by buyers.

Support schemes studied were: the **Prime Minister's Employment Generation Programme (PMEGP)**, a credit-linked subsidy for new micro enterprises run by KVIC, with project cost up to Rs. 20 lakh in the service sector, subsidy of 15% to 35% depending on category and rural or urban location, own contribution of 5% to 10%, and a requirement of at least Class 8 pass for projects above Rs. 5 lakh in services; the **Pradhan Mantri Mudra Yojana**, collateral-free loans for non-farm micro enterprises in the Shishu (up to Rs. 50,000), Kishor (up to Rs. 5 lakh) and Tarun (up to Rs. 10 lakh) categories; **Startup India** recognition by DPIIT with tax and other benefits for innovative startups; the **Stand-Up India** loans for women and SC/ST entrepreneurs, whose present status is to be checked; and the Bihar government's **Mukhyamantri Udyami Yojana**, which offers assistance of up to Rs. 10 lakh to eligible Bihar residents, half as a subsidy and half as an interest-free loan repaid in 84 monthly instalments, with online applications on the state Udyami portal. Schemes change often, so eligibility, limits and dates must always be checked on the official portal before applying.

3.7 Legal setup of business

The first legal choice is the *business structure* (Table 1). A sole proprietorship is the simplest, but the owner and the business are the same person and liability is unlimited. A partnership under the Indian Partnership Act, 1932 is run under a partnership deed. A Limited Liability Partnership under the LLP Act, 2008 and a company under the Companies Act, 2013 (One Person Company or private limited) are separate legal persons, offer limited liability and are suited to ventures that expect to raise outside capital, with more compliance in return.

Structure	Owners	Liability	Registration	Suited to
Sole proprietorship	One	Unlimited	No separate incorporation; Udyam, GST, licences as needed	Small shops, services, home businesses
Partnership firm	Two or more	Unlimited, joint	Partnership deed; registration with the Registrar of Firms is optional but advisable	Family or friends' businesses
LLP	Two or more partners	Limited to contribution	Registered with MCA	Professional firms, small growing ventures
One Person Company	One	Limited	Incorporated with MCA under Companies Act, 2013	Single founder wanting limited liability
Private limited company	Two or more	Limited to shares	Incorporated with MCA under Companies Act, 2013	Startups raising investment

Table 1: Common business structures (for learning; verify current rules before choosing).

After choosing the structure, the usual steps are: PAN, a current bank account in the business name, Udyam Registration, GST registration where the turnover or the nature of supply requires it, licences for the trade (for a food business the FSSAI basic registration up to an annual turnover of Rs. 12 lakh and a State licence above it), a shop and establishment or trade licence from the local body, and registration under labour laws such as EPF and ESIC once the employee-number limits are crossed. A brand name or logo can be protected as a trademark under the Trade Marks Act, 1999. Contracts with suppliers, customers and employees are governed by the Indian Contract Act, 1872 and should be in writing.

3.8 Marketing for new ventures

Marketing starts with *segmentation, targeting and positioning*: dividing the market into groups, choosing the group that can be served best and deciding what place the venture should hold in the customer's mind. The four Ps - product, price, place and promotion - are extended for services with people, process and physical evidence. A *brand* is the promise the customer remembers: name, logo, tagline, quality and behaviour. A new venture with a small budget depends on low-cost channels: word of mouth, WhatsApp Business (catalogue, status and broadcast lists), a free Google Business Profile, Facebook and Instagram pages, pamphlets and banners near where customers gather, tie-ups with institutions, free trials and referral offers.

Customer acquisition cost (CAC) = marketing spend / new customers won, and it should be recovered quickly from the margin the customer brings. Results are tracked in a simple sheet noting where each customer heard of the venture, so money is moved to what works. Claims must be honest, reviews must not be faked, and advertising must follow consumer protection law and the advertising codes of the country.

3.9 Risk assessment

A business risk is an uncertain event that can hurt the venture. Risks may be of market (fewer customers), finance (cost overrun, cash shortage), operations (supplier failure, quality problem), people (key worker leaves), legal and compliance, technology and external events such as weather or price changes. The process is to identify, assess, respond and monitor. Each risk is rated for probability and impact on a scale of 1 to 5, the score is probability x impact, and the expected monetary value (EMV) = probability x loss in rupees. Responses are to avoid the risk, reduce it, transfer it (insurance, contracts) or accept it with a reserve. A scenario analysis of best, likely and worst cases and a contingency reserve in the working capital prepare the owner for bad months.

3.10 Business pitch practice

A pitch is a short, structured talk that persuades a listener - a bank officer, a mentor, an investor or a customer - to give time, money or trust. An elevator pitch lasts 30 to 60 seconds; a short pitch about three minutes; a full presentation 10 minutes or more. The usual order is the problem, the solution, the market, the business model, the numbers and the ask (Figure 2). A slide deck should carry one idea per slide, large text and visuals, with about seven to ten slides. Delivery needs a clear voice, eye contact, a steady pace and rehearsal with a timer. In questions and answers the speaker listens fully, answers briefly and honestly and says 'I will find out' rather than inventing an answer. Numbers in a pitch must match the business plan.

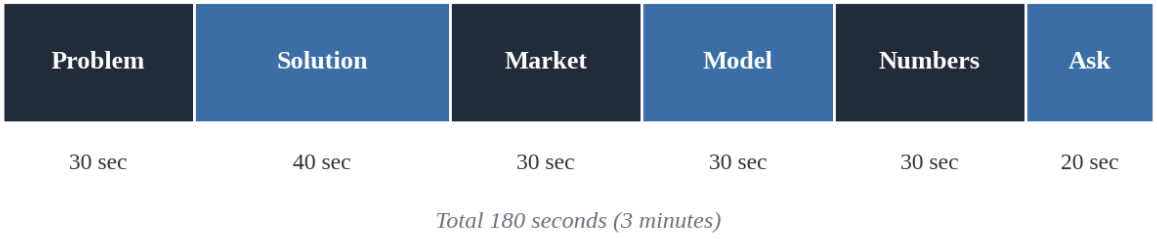

Figure 2: Structure of a three-minute business pitch

3.11 Rules, ethics and limitations

Entrepreneurs must follow the law and work ethically. Agreements are governed by the Indian Contract Act, 1872; companies and LLPs by the Companies Act, 2013 and the LLP Act, 2008; the MSME sector by the MSMED Act, 2006; taxes by the GST and income-tax laws; customers by the Consumer Protection Act, 2019; food businesses by the Food Safety and Standards Act, 2006; and personal data of customers and employees may be collected and used only with consent and for a stated purpose under the Digital Personal Data Protection Act, 2023, while the Information Technology Act, 2000 governs electronic records and online conduct. Copyright, trademark and licence terms of software, images and templates must be respected.

Good practice includes truthful advertising, fair prices and weights, honest accounts and tax payment, fair wages and safe workplaces, no child labour, care for the environment, avoiding conflicts of interest and keeping customer information confidential. The schemes, limits, rates and laws mentioned in this report change often, so they must be verified against official sources, and the figures in the examples are dummy values for learning only.

4. Week-wise Plan and Execution

Week	Days	Activities
Week 1	Days 1-6	Orientation and foundations: company induction, introduction to Entrepreneurship Development, Entrepreneurial Mindset and Opportunity Identification, each with a concept session and a hands-on task.
Week 2	Days 7-12	Plan and test: Business Plan Writing, Market Feasibility Study and Financial Planning for Startups, each with a concept session and a hands-on task.
Week 3	Days 13-18	Support, law and market: Government Schemes (MSME), Legal Setup of Business and Marketing for New Ventures.
Week 4	Days 19-24	Risk and pitch: Risk Assessment, Business Pitch Practice, a case study exercise and a mock practical exercise.
Week 5	Days 25-28	Project closure: supervisor review and feedback, internship report drafting, presentation preparation and final review.

5. Week-wise Narrative

Week 1: The first week was devoted to orientation and foundations. After company induction, the student was introduced to Entrepreneurship Development and studied the Entrepreneurial Mindset and Opportunity Identification, with a concept day and a practice day for each.

Week 2: In the second week the study moved to Business Plan Writing, Market Feasibility Study and Financial Planning for Startups, each studied in a concept session and then practised on sample ventures.

Week 3: The third week focused on Government Schemes (MSME), Legal Setup of Business and Marketing for New Ventures.

Week 4: In the fourth week the student studied Risk Assessment and Business Pitch Practice. A case study exercise and a mock practical exercise were also completed in this week.

Week 5: The last week was devoted to project closure: supervisor review and feedback, drafting of the internship report, preparation of a presentation and final review before submission.

6. Topic-wise Learning in Detail

6.1 Entrepreneurial Mindset

Concept: Traits of entrepreneurs, risk taking and self-motivation. **Practice carried out:** Completing a self-assessment of eight entrepreneurial traits, writing a personal goal plan and noting lessons from reading about local entrepreneurs.

6.2 Opportunity Identification

Concept: Spotting needs, trends and gaps in the market. **Practice carried out:** Listing ten local problems, shortlisting three ideas and scoring them on a weighted matrix.

6.3 Business Plan Writing

Concept: Writing the sections of a business plan. **Practice carried out:** Filling a business model canvas and writing the sections of a short business plan with SMART objectives.

6.4 Market Feasibility Study

Concept: Demand, competition and viability of a business idea. **Practice carried out:** Preparing a ten-question survey, tabulating dummy responses, comparing four competitors and estimating the demand funnel.

6.5 Financial Planning for Startups

Concept: Startup cost, working capital, revenue and break-even. **Practice carried out:** Preparing the project cost and means of finance, and calculating break-even, margin of safety, EMI and payback in MS Excel.

6.6 Government Schemes (MSME)

Concept: MSME registration, Mudra, PMEGP and other support schemes. **Practice carried out:** Preparing a scheme eligibility chart, a dummy Udyam registration data sheet and a list of documents.

6.7 Legal Setup of Business

Concept: Business structures, registrations and licences. **Practice carried out:** Comparing structures, preparing a licence checklist and an outline of a partnership deed.

6.8 Marketing for New Ventures

Concept: Low-cost marketing, branding and customer acquisition. **Practice carried out:** Writing a positioning statement, designing a pamphlet and WhatsApp catalogue, planning a launch budget and calculating CAC.

6.9 Risk Assessment

Concept: Business risks, their impact and mitigation. **Practice carried out:** Preparing a risk register, a probability-impact matrix, EMV and best, likely and worst scenarios.

6.10 Business Pitch Practice

Concept: Preparing and delivering a short business pitch. **Practice carried out:** Preparing a seven-slide pitch, rehearsing it with a timer and answering practice questions.

7. Rules, Ethics and Good Practice - Points Studied

Entrepreneurship operates within a legal and ethical framework. Contracts must follow the Indian Contract Act, 1872 and be clear on price, time and responsibilities. Customer and employee data may be used only with consent and for a stated purpose under the Digital Personal Data Protection Act, 2023. Food, consumer and labour laws apply to the work, and software, images and templates must respect copyright and licence terms.

Good practice includes honest advertising, keeping accounts and paying taxes, applying for the correct licences before starting, separating personal and business money, keeping customer information confidential, using strong passwords and two-step verification on business accounts, recording decisions, and never promising what the venture cannot deliver.

8. Process Flows Studied

Process mapping was used to understand how work in Entrepreneurship Development moves from start to finish. The main flows studied were:

- **Entrepreneurial process:** Idea > Opportunity screening > Feasibility study > Business plan > Finance and legal setup > Launch > Review and growth.
- **Opportunity:** Observe > List problems > Generate ideas > Score on matrix > Test with customers > Select one idea.
- **Financial planning:** Estimate costs > Project cost > Means of finance > Break-even > Cash-flow check > Monitor monthly.
- **Setup:** Choose structure > PAN and bank account > Udyam > Licences > GST if required > Start trading.
- **Pitch:** Know the audience > Build the story > Prepare slides > Rehearse > Deliver > Answer questions > Follow up.

9. Worked Examples with Sample (Dummy) Data

The examples below use a fictitious venture, Annapurna Tiffin Service, a home-style tiffin service for hostel and coaching students and working singles in a town in Bihar. All names, numbers and results are dummy figures for learning, and the scheme and licence notes must be verified on official portals before any real use.

Example A: Entrepreneurial self-assessment

The student rated eight traits from 1 (weak) to 5 (strong): initiative 4, risk taking 3, self-motivation 4, persistence 4, planning 3, communication 4, financial discipline 3 and adaptability 4. The total is 4 + 3 + 4 + 4 + 3 + 4 + 3 + 4 = 29 out of 40, or 72.5%. The three lowest scores - risk taking, planning and financial discipline - were turned into a goal plan: study three small business case stories to understand calculated risk, prepare a weekly plan every Sunday, and record every rupee spent in a cash book for 30 days.

Example B: Opportunity screening

Ten local problems were listed and three business ideas shortlisted. They were scored from 1 to 5 on five weighted criteria (a higher score is better for the entrepreneur, so low competition scores high). The weighted score is the sum of weight x score, for example for the tiffin service 0.30 x 5 + 0.20 x 3 + 0.20 x 4 + 0.20 x 4 + 0.10 x 3 = 4.0. The tiffin service ranked first and was taken forward.

Criterion	Weight	Tiffin service	Phone repair	Stationery and photocopy
Demand	30%	5	4	3
Competition (low = high score)	20%	3	2	2
Investment needed (low = high score)	20%	4	3	3
Fit with own skills	20%	4	2	3
Ease of legal approval	10%	3	4	4
Weighted score	100%	**4.0**	**3.0**	**2.9**

Example C: Business model canvas

The selected idea was described on a business model canvas (Figure 3). The value proposition is a hygienic, home-style meal at Rs. 70 delivered by 1 pm, sold mainly through a monthly subscription of 26 tiffins, with a trial tiffin to build trust.

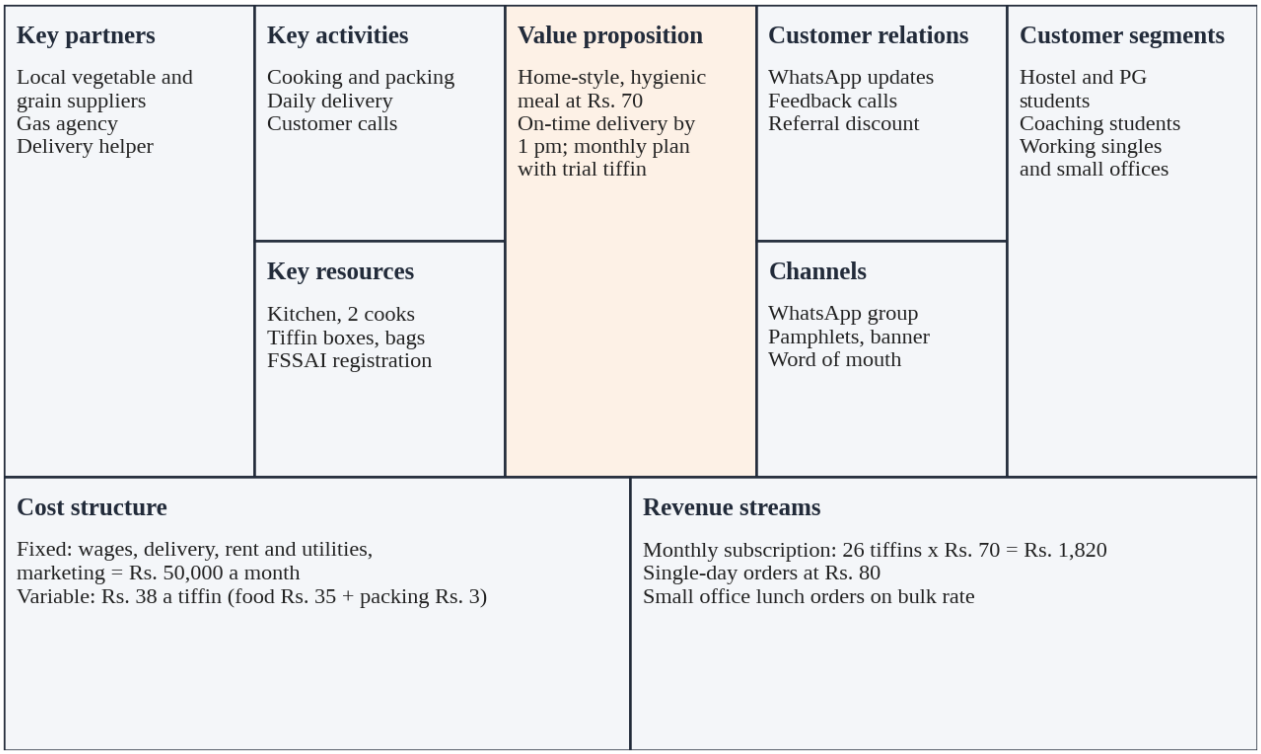

Figure 3: Business model canvas of Annapurna Tiffin Service

Example D: Market feasibility

A ten-question survey of 40 people near hostels and coaching centres showed that 28 (70%) would take a daily tiffin if the price was fair and the food hygienic. Within 3 km there were about 1,500 possible customers (1,200 students and 300 working people), so about 1,050 were interested. The plan of 75 customers a day is 75 / 1,050 = 7.1% of the interested group, a modest share (Figure 4). Four competitors were compared, and a price of Rs. 70 was chosen between the cheapest mess and the restaurant delivery apps. A sensitivity check showed that if customers were 20% fewer (60 a day), monthly profit would fall to about zero, so the first-month marketing plan was made a priority.

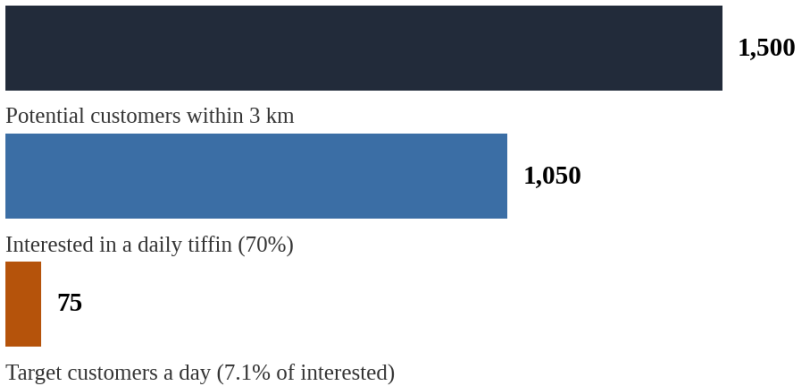

Figure 4: Demand funnel for the tiffin service

Competitor	Price a meal	Strength	Weakness
Maa Kitchen mess	Rs. 60	Low price	Average taste, no delivery
Hostel in-house mess	Rs. 55 to 65	Convenient	Limited menu, quality complaints
Raju Dhaba	Rs. 80	Good taste	Delivery only for large orders
Restaurant apps	Rs. 110 and more	Wide choice, fast delivery	High price with delivery fee

Example E: Project cost and means of finance

The fixed capital was Rs. 1,25,000 (Table below). Working capital was calculated for one month at the planned sales: fixed running cost Rs. 50,000 plus variable cost 1,950 tiffins x Rs. 38 = Rs. 74,100, which is Rs. 1,24,100, and with a contingency reserve of Rs. 10,000 it was rounded to Rs. 1,35,000. The project cost is therefore Rs. 2,60,000. It is financed by the owner's savings of Rs. 1,10,000 (42.3%) and a bank loan of Rs. 1,50,000 (57.7%). At an assumed interest of 12% a year for 36 months the EMI = 1,50,000 x 0.01 x $(1.01)^{36}$ / ($(1.01)^{36}$ - 1) = about Rs. 4,982. Figure 5 shows the split.

Item	Amount (Rs.)
Kitchen equipment (stove, vessels, mixer, refrigerator)	60,000
Tiffin boxes and delivery bags	25,000
Licences and registrations	6,000
Branding and launch marketing	14,000
Shop deposit and fitting	20,000
Fixed capital	**1,25,000**
Working capital for one month with Rs. 10,000 reserve	1,35,000
Total project cost	**2,60,000**

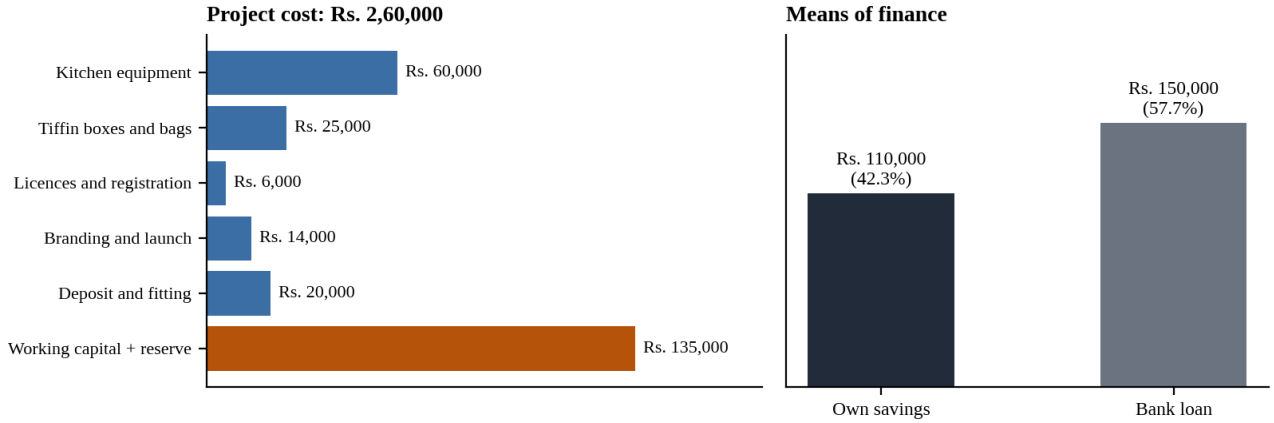

Figure 5: Project cost and means of finance

Example F: Break-even and profit

The selling price is Rs. 70 and the variable cost is Rs. 38 (food Rs. 35 and packing Rs. 3), so the contribution is Rs. 32 a tiffin. The fixed cost is Rs. 50,000 a month (wages Rs. 24,000, delivery Rs. 9,000, rent and utilities Rs. 12,000, marketing Rs. 3,000 and miscellaneous Rs. 2,000). Break-even units = 50,000 / 32 = 1,562.5, so 1,563 tiffins a month, or about 61 a day over 26 working days, with break-even revenue of Rs. 1,09,410. At the planned 75 a day (1,950 a month) revenue is Rs. 1,36,500, contribution is 1,950 x 32 = Rs. 62,400 and profit is 62,400 - 50,000 = Rs. 12,400 a month. The margin of safety is (1,950 - 1,563) / 1,950 = 19.8%. The profit covers the EMI of Rs. 4,982 about 2.5 times, and the simple payback is 2,60,000 / 12,400 = about 21 months (Figure 6). The thin margin of safety showed why customer acquisition and cost control matter.

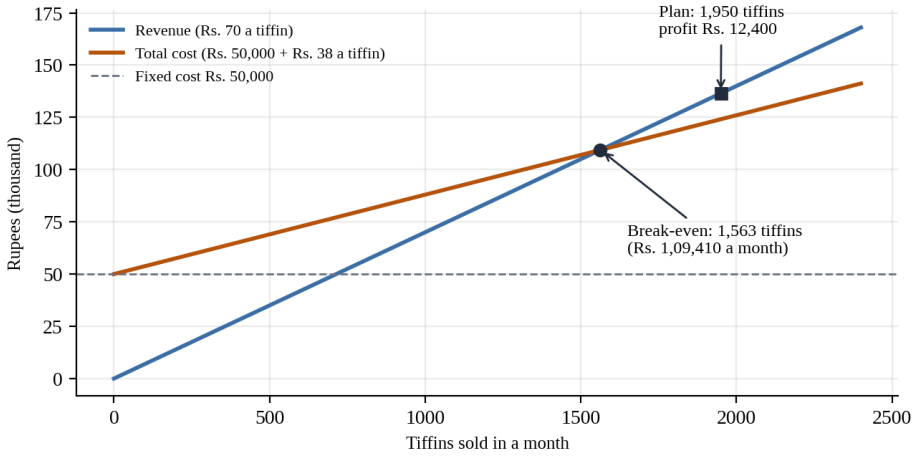

Figure 6: Break-even chart of the tiffin service

Example G: Scheme eligibility check

The venture was checked against support schemes for an applicant (dummy) from Bihar, a first-time entrepreneur in the general category setting up a service unit in an urban area. In the PMEGP illustration, a project cost of Rs. 2,60,000 with 15% subsidy would give Rs. 39,000 and 10% own contribution Rs. 26,000, but the actual rates, the cost accepted and the rule that a unit cannot take two subsidies for the same project must be checked on the official portal.

Scheme	Fit for the venture	Key points to verify
Udyam Registration	Yes - micro enterprise	Free online registration; investment far below the micro limit of Rs. 2.5 crore
PMEGP (KVIC)	Possible - service unit, new venture	Subsidy 15% to 35%; own contribution 5% to 10%; project cost limit Rs. 20 lakh; online application with project report
PM Mudra Yojana	Possible - loan of Rs. 1,50,000 falls in the Kishor category	Collateral-free loan for non-farm micro enterprise; bank decides on sanction
Mukhyamantri Udyami Yojana (Bihar)	Check eligibility by category	Up to Rs. 10 lakh, half subsidy and half interest-free loan; selection and online application on state portal

Example H: Legal setup and licence checklist

The owner chose a sole proprietorship for its simplicity. The expected annual turnover is Rs. 1,36,500 x 12 = Rs. 16,38,000. Because this is above Rs. 12 lakh, a State FSSAI licence rather than the basic registration is needed for a food business, and the owner must also compare the turnover with the GST registration limit that applies to the supply before deciding on GST.

Step	Item	Where / who	Status in example
1	Owner's PAN and Aadhaar-linked details	Income tax and UIDAI records	Available
2	Current account in business name	Bank	Planned in week 1
3	Udyam Registration	Udyam portal	Applied online
4	FSSAI State licence (turnover above Rs. 12 lakh)	State food safety office / FoSCoS	Kitchen layout and food safety plan prepared
5	Shop and establishment or trade licence	Local body	To apply before opening
6	GST (check limit and nature of supply)	GST portal	Decision after checking turnover
7	Brand name check and trademark	Trade Marks Registry	Optional, after first year

Example I: Launch marketing plan

A launch budget of Rs. 14,000 was planned: pamphlets near hostels and coaching centres Rs. 5,000, a banner and signboard Rs. 4,000, free trial tiffins 50 x Rs. 70 = Rs. 3,500 and referral discounts Rs. 1,500. WhatsApp Business (catalogue, status and a broadcast list) and a free Google Business Profile cost nothing. If the launch wins 75 customers, CAC = 14,000 / 75 = about Rs. 187. Since each tiffin gives a contribution of Rs. 32, the acquisition cost is recovered in about 6 working days of a customer's meals. A tracking sheet recorded where each customer heard about the service.

Example J: Risk register and matrix

Five risks were rated for probability (P) and impact (I) on a scale of 1 to 5. R1: fewer customers than planned (P = 3, I = 4, score 12). R2: a food safety or hygiene complaint (P = 2, I = 5, score 10). R3: rise in the price of vegetables and grain (P = 4, I = 2, score 8). R4: the cook leaves (P = 3, I = 3, score 9). R5: delivery delay in rain or traffic (P = 2, I = 2, score 4). The ranking was R1, R2, R4, R3 and R5 (Figure 7). The expected monetary value of R1, taking a revenue loss of Rs. 20,000 a month at a probability of 30%, was 0.30 x 20,000 = Rs. 6,000, which is covered by the contingency reserve of Rs. 10,000. Responses were: R1 mitigate by trial tiffins, referral offers and early marketing; R2 avoid by strict kitchen hygiene, a weekly cleaning checklist and a State licence; R3 mitigate by buying staples in bulk and revising the menu price with notice; R4 mitigate by training a second helper; R5 accept with early dispatch and a fixed delivery window. Each risk had an owner and a review date.

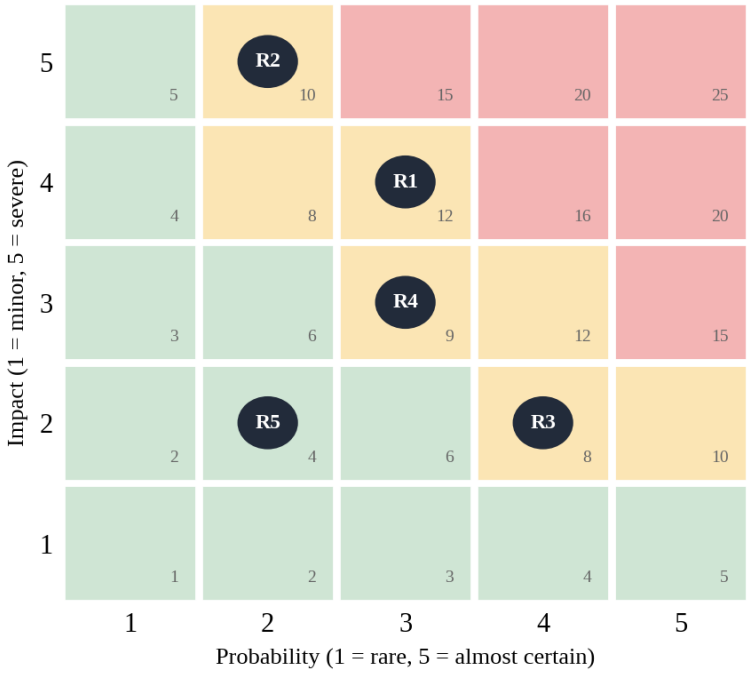

Figure 7: Probability-impact matrix of the five risks

Example K: Pitch practice and feedback

A three-minute pitch of seven slides followed the order shown in Figure 2: problem (hostel food is unhygienic or costly), solution (a home-style tiffin at Rs. 70), market (1,050 interested customers), business model (monthly subscription), numbers (break-even at 61 tiffins a day and profit of Rs. 12,400 at 75), team, and the ask of a Rs. 1,50,000 loan. The supervisor scored the rehearsal on a scale of 1 to 5 and the feedback was recorded as below.

Criterion	Score	Supervisor's comment
Clarity of problem and solution	4	Clear; use one real example
Evidence and numbers	3	Show the survey table on a slide
Delivery and timing	4	Finished in 2 minutes 50 seconds
Answers to questions	3	Prepare an answer on competition

10. Project: New Venture Business Plan

Scope. The internship work was organised around a project in which an opportunity evaluation, a business model canvas, a market feasibility study, a financial plan with break-even analysis, a funding and legal plan, a launch marketing plan, a risk register and a business pitch were prepared for a fictitious venture, using sample documents and dummy data.

Steps followed. (i) Assessed own traits and listed local problems; (ii) scored ideas and chose one on a weighted matrix; (iii) filled the business model canvas; (iv) planned and tabulated a customer survey and compared competitors; (v) prepared the project cost, means of finance and break-even sheet in MS Excel; (vi) checked scheme eligibility and prepared the licence checklist; (vii) planned launch marketing and calculated CAC; (viii) prepared the risk register and probability-impact matrix; (ix) prepared and rehearsed a three-minute pitch and reviewed the work with the supervisor.

Skills and tools. Business Plan Writing, Feasibility Study, Financial Planning, MS Excel, Canva or PowerPoint basics and Project Documentation.

Outputs. Self-assessment and goal plan, idea scoring matrix, business model canvas, survey table and competitor comparison, project cost and means of finance, break-even sheet, scheme eligibility chart, licence checklist, launch marketing budget, risk register and matrix, pitch deck and feedback sheet, and this internship report.

11. Case Study Exercise: A Shop That Closed in Four Months

A case study exercise was completed on a typical business problem. The business and figures are illustrative and not taken from any real organisation.

Background. A young entrepreneur (fictitious) invested savings of Rs. 4,00,000 to open a readymade garments shop in a small town. He spent Rs. 80,000 on the shop deposit and fitting, Rs. 2,20,000 on stock, Rs. 20,000 on licences and branding and kept Rs. 80,000 as cash. He expected monthly sales of Rs. 1,50,000.

Problem observed. Actual sales were only Rs. 60,000 a month, 40% of the plan. The gross margin was 25%, so the monthly gross profit was Rs. 15,000 against a fixed cost of Rs. 40,000 (rent, wages, electricity and other costs), a loss of Rs. 25,000 every month. With Rs. 80,000 in cash and Rs. 20,000 borrowed from relatives, the money lasted 1,00,000 / 25,000 = 4 months and the shop closed. No market survey had been done, the stock was bought in sizes and styles the town did not want, there was no cash-flow plan, and no break-even was calculated: break-even sales = 40,000 / 0.25 = Rs. 1,60,000 a month, which was higher than even the planned sales of Rs. 1,50,000, so the plan itself would have made a loss. There was also no marketing plan and the owner kept personal and shop money together.

Analysis. The main problem was not bad luck but the absence of basic entrepreneurship planning. Without a feasibility study the demand was assumed; without a break-even calculation the plan was unviable on paper; without a cash-flow plan the venture ran out of cash before it could learn; and without a risk register and a smaller first stock the loss was total.

Recommendations. (1) Survey customers and visit competitors before investing. (2) Calculate break-even and test whether the plan can reach it. (3) Start with a small first stock and a pre-order or trial. (4) Prepare a monthly cash-flow plan with a contingency reserve. (5) Plan low-cost marketing and measure results. (6) Keep a separate business account and a daily cash book. (7) Review monthly and set pivot or stop triggers in advance.

Expected result and lesson learned. With a tested idea, a viable plan and a small start, a similar venture can expect to learn from the market at a low cost and to adjust early. The lesson is that entrepreneurship is a system: idea, market, money, law, marketing and risk must be planned together, and every plan must be tested against numbers before it is trusted.

12. Mock Practical Exercise: A Thirty-Day Business Plan

In the mock practical exercise the student prepared a business plan for a sample (dummy) local venture from the first idea to the final pitch, using the tools and methods practised earlier. The steps followed were:

1. Mindset: completed the self-assessment and wrote a goal plan.
2. Opportunity: listed problems, generated ideas and scored them.
3. Business plan: filled the business model canvas and wrote the plan sections.
4. Feasibility: tabulated a survey, compared competitors and estimated demand.
5. Finance: prepared the project cost, means of finance and break-even sheet.
6. Support and law: checked schemes and prepared the licence checklist.
7. Marketing and risk: planned the launch budget, CAC and risk register.
8. Pitch: prepared the slides, rehearsed with a timer and noted feedback.

The exercise showed that every step depends on the one before it: an untested idea breaks the plan, a wrong cost estimate changes the break-even, ignored licences stop the launch, missing marketing hides the product, unmanaged risk uses up the reserve, and an honest pitch is the base of the next decision.

13. Sample Checklists Prepared

Checklists were prepared as part of the hands-on tasks. They reduce errors and make routine work easier to review.

Idea and Opportunity Checklist

- Real customer problem described in one sentence.

- At least ten possible customers spoken to.
- Ideas scored on a weighted matrix.
- Competitors and substitutes listed.
- Cheap test planned before large spending.

Business Plan and Feasibility Checklist

- Business model canvas completed on one page.
- SMART objectives written.
- Survey sample, questions and results recorded.
- Demand estimate shows potential, interested and target customers.
- Assumptions written beside each number.

Finance and Funding Checklist

- Fixed capital and working capital stated separately.
- Contingency reserve included.
- Break-even units, revenue and margin of safety calculated.
- Means of finance and EMI worked out.
- Monthly cash-flow checked for negative months.

Legal and Scheme Checklist

- Business structure chosen with reasons.
- PAN, bank account and Udyam Registration planned.
- Trade licences (such as FSSAI) matched to turnover.
- Scheme eligibility checked on the official portal.
- Written contracts for supplier, staff and customer terms.

Marketing, Risk and Pitch Checklist

- Target customer and positioning statement written.
- Launch budget and CAC calculated.
- Risk register with owners, responses and review dates.
- Pitch within the time limit with matching numbers.
- Feedback noted and acted on.

14. Tools and Resources

Learning materials, MS Excel and Google Sheets for survey tables, cost sheets and break-even models, Canva or draw.io style tools for the canvas and charts, MS Word for the business plan, PowerPoint for the pitch, WhatsApp Business as a sample marketing tool, sample business plan templates, official scheme portals and guides for reference, assignments and mentor feedback were used during the internship.

15. Programme at a Glance

The programme was in the domain of Entrepreneurship Development with RKNEXORA PRIVATE LIMITED as the agency. It required a minimum of 120 hours over 28 learning days, organised in three phases: Orientation (Days 1-2), Learning and Practice (Days 3-22) and Project and Review (Days 23-28). Attendance was recorded in the Internship Attendance Log, signed by the supervisor (see Attendance Sheet).

LEARNING OUTCOME

a. Knowledge Acquired

1. The meaning of entrepreneurship, the traits of entrepreneurs and the stages of the entrepreneurial process.
2. How to identify opportunities from needs, trends and gaps and to screen ideas on a weighted matrix.
3. How to write a business plan and a business model canvas with SMART objectives.
4. How to test an idea through a customer survey, competitor comparison and demand funnel.
5. How to prepare project cost, means of finance and break-even, margin of safety, EMI and payback.
6. How MSME classification, Udyam Registration, PMEGP, Mudra and Bihar's Udyami Yojana support new ventures, and how to choose a legal structure and licences.
7. How to plan launch marketing and CAC, assess risks with a register and EMV, and deliver a three-minute pitch.

Glossary of Terms Learned

- **Entrepreneur** - Person who starts and runs a venture, bearing its risk to create value.
- **Intrapreneur** - Employee who shows entrepreneurial initiative inside an organisation.
- **Opportunity** - An idea that meets a real need at a price customers will pay and can earn a profit.
- **MVP** - Minimum viable product: the simplest version used to test an idea with customers.
- **Business plan** - Written description of what the venture sells, to whom, how and with what result.
- **Business model canvas** - One-page summary of a business in nine blocks.
- **SMART** - Specific, measurable, achievable, relevant, time-bound objectives.
- **TAM / SAM / SOM** - Total, serviceable and obtainable market.
- **SWOT** - Strengths, weaknesses, opportunities and threats.
- **Fixed capital / Working capital** - Money for assets / money for daily running costs.
- **Fixed cost / Variable cost** - Cost that does not change with sales / cost that rises with each unit.
- **Contribution** - Selling price minus variable cost per unit.
- **Break-even point** - Sales level at which revenue equals total cost.
- **Margin of safety** - How far sales can fall before the venture makes a loss.
- **EMI** - Equal monthly instalment of a loan.
- **MSME** - Micro, small and medium enterprises.
- **Udyam Registration** - Free online registration that gives an MSME identity.
- **PMEGP** - Credit-linked subsidy scheme for new micro enterprises.
- **CAC** - Customer acquisition cost: marketing spend divided by new customers.
- **EMV** - Expected monetary value: probability multiplied by the loss in rupees.
- **Pitch** - Short structured talk that persuades listeners to give time, money or trust.

b. Skills Learned

Technical skills. Scoring and selecting business ideas; filling a business model canvas; designing a survey and estimating demand; preparing project cost and means of finance; calculating break-even, margin of safety, EMI and payback in MS Excel; preparing a scheme eligibility chart and licence checklist; planning a launch marketing budget and calculating CAC; maintaining a risk register and probability-impact matrix; and preparing and delivering a pitch.

Professional skills. Initiative and self-motivation; planning and organising; analytical and numerical thinking; clear communication and report writing; negotiation and persuasion; attention to detail; time management; ethical and legal awareness; and acceptance of feedback.

These skills were developed through repeated practice and daily documentation. Survey and cost exercises improved numerical thinking, the risk and legal work improved foresight and care, canvases and charts improved the ability to explain a plan visually, and the pitch rehearsals improved confidence in speaking.

c. Observed Attitude and Gained Values

1. Test before you invest: an idea becomes a business only after real customers have been asked.
2. Accountability: every task, cost and risk needs one clear owner.
3. Honesty: costs, risks and numbers must be reported truthfully, especially to a bank or a mentor.
4. Resilience: failure is information; the plan is improved after every test.
5. Discipline and punctuality: daily attendance records and regular reporting at fixed timings.

d. Challenges Faced

Understanding terms such as contribution, break-even, working capital and EMI was handled by using a glossary, worked examples in Excel and mentor guidance.

Getting honest survey answers and realistic demand figures was difficult at first; this was handled by asking neutral questions, using a stated sample and writing assumptions beside each estimate.

Choosing realistic costs and prices was handled by using ranges, quotations from sample suppliers and conservative assumptions.

Keeping the scheme and legal details correct was handled by noting the official portal beside each point and checking limits again before finalising the report.

Learning several tools in a short time was handled by practising each tool on a small task the same day and keeping short step notes for revision.

Managing time between practice, documentation and report writing was handled by dividing work week by week and using review days for corrections.

e. Career Pathways

The knowledge gained supports careers and ventures such as Business Development Executive, Startup Associate, Business Analyst, Project or Operations Coordinator, Marketing Executive, Relationship Officer in banks and microfinance, MSME and Udyami scheme facilitator, incubator or accelerator programme associate, and, with experience, founder of a small business or startup. Opportunities exist in start-ups, small and medium businesses, banks and finance companies, consulting firms, incubators, non-profit organisations, rural and agri-based enterprises and family businesses, and in government and state-level enterprise promotion programmes. Related study options include BBA, MBA or PGDM with entrepreneurship, postgraduate courses in business management, and short certifications in entrepreneurship, finance for non-finance managers and digital marketing. Because schemes, tools and markets change quickly, continuous learning and practical experience are essential.

CONCLUSION

The internship in Entrepreneurship Development was a valuable learning experience that integrated academic knowledge with practical activity. The programme achieved its objectives through structured learning, guided practice, assignments, supervisor review and documentation.

The student gained a clear understanding of how a business idea is screened, tested, planned, financed, registered and launched - through the entrepreneurial mindset, opportunity identification, business plan writing, market feasibility, financial planning, government schemes, legal setup, marketing, risk assessment and pitching - and acquired practical familiarity with scoring matrices, business model canvases, break-even calculations, scheme eligibility charts, licence checklists, risk registers and pitch outlines. The experience has strengthened the student's employability and provides a foundation for further study and for self-employment or work in business and management.

Reflection

Looking back, the most useful lesson of the internship was that a venture is a chain, and a chain is only as strong as its weakest link. A tested idea gives direction, the plan shows the whole business, the feasibility study checks the market, the financial plan shows whether it can survive, the schemes and legal setup make it possible and lawful, marketing brings customers, risk management protects it and a good pitch earns trust. The case study showed how a shop can fail when even one link, such as the break-even calculation, is missing. Drawing the canvas, the break-even chart and the risk matrix made abstract ideas concrete, and supervisor feedback on the pitch showed where understanding was weak. The habit of recording each day's work also made it easier to see progress over the weeks.

Objectives and Achievement

The objective of understanding the entrepreneurial mindset and opportunity identification was achieved through concept sessions, a self-assessment and a scoring matrix. The objective of learning business plan writing, feasibility and financial planning was achieved through a business model canvas, a demand funnel and a break-even sheet. The objective of learning government schemes, legal setup and marketing was achieved through an eligibility chart, a licence checklist and a launch marketing plan. The objective of learning risk assessment and pitching was achieved through a risk register, a matrix and a rehearsed pitch. The objective of completing the project was achieved through the New Venture Business Plan and this report. The objective of developing professional discipline was achieved through daily attendance, supervisor review and report writing.

Future Scope

The knowledge gained can support further study of management, commerce and technology, and careers or ventures in small business, services, agri-enterprise, retail, education and digital businesses. With growing state and national support for startups and micro enterprises, wider digital payments and online marketing, local entrepreneurship in towns and villages, and the demand for self-employment, trained and ethical entrepreneurs are increasingly needed, including in Bihar.

Suggestions for Improvement of the Programme

1. Include talks by local entrepreneurs, bank officers and MSME officials, with appropriate permissions, and visits to a District Industries Centre.
2. Continue regular mentor feedback and progress reviews.
3. Provide more project-based activities such as preparing a real project report for a small local business under supervision.
4. Encourage students to maintain detailed daily documentation.
